

Tencent 腾讯

Tech for Good

TENCENT CORPORATE SOCIAL RESPONSIBILITY REPORT 2018

Tencent Holdings Limited (Tencent, or the Company) is pleased to publish this condensed corporate social responsibility (CSR) report for 2018, entitled *Tech for Good*. The report, which supplements the environmental, social and governance report Tencent publishes as a Hong Kong-listed company, is part of an ongoing initiative to further engage the international investment community and stakeholders as Tencent deepens its CSR efforts.

Tencent celebrated its 20th anniversary in 2018. In the last two decades, the Company has experienced tremendous growth and attracted increasing attention from users, businesses, developers and partners. In response to stakeholders' higher expectations for the Company's commitment to using its technology for social good, Tencent has thus made this report into an annual publication, enhancing the timeliness and comprehensiveness of the Company's communication on its CSR efforts.

This condensed report summarises the Company's various initiatives to drive its "Tech for Good" philosophy and to allow the international community to better understand the Company's CSR strategy and approach.

As a responsible Internet-based technology and cultural enterprise, Tencent is committed to promoting the sustainable development of society by leveraging its advanced technologies, services and products. This report covers a range of CSR initiatives the Company launched in 2018 to improve people's lives in areas such as healthcare, retail, transportation and education, as well as bolstering its green operations and its support for employees.

CSR has been central to Tencent's values since its inception in 1998. By adhering to its "Tech for Good" philosophy, Tencent remains a keen advocate of using technology to create social value by optimising the operation of different industries and supporting better lifestyle for everyone.

Over the years, the Company has contributed to building a sustainable smart society through its various CSR initiatives and by using technology to address real world problems and improve social, environmental and economic outcomes. The Tencent Charity Fund has also taken concrete steps to promote "Rational Charity" and support underprivileged groups.

Tech for Good is not only a review of Tencent's progress in the past year. More importantly, it reflects the Company's commitment to ensuring close cooperation with its stakeholders to create a better future.

Note: This condensed report was developed with reference to the guidelines of the Global Reporting Initiative (GRI) and the Hong Kong Exchanges and Clearing Limited at the time of writing.

**MESSAGES FROM
THE MANAGEMENT TEAM**

DIGITALISATION IS GREAT SOURCE OF SOCIAL GOOD IN OUR TIME

MA, HUATENG (Pony Ma)

Co-founder, Chairman of the Board and Chief Executive Officer of Tencent

We believe strongly in the power of digitalisation, and have been thinking deeply about the ethics of technology. Over the past year, we actively advocated the idea of “Tech for Good” and implemented it in our daily operations. We hope “Tech for Good” can become part of Tencent’s vision and mission.

The number 20 has a special meaning. In traditional Chinese culture, when a man turns 20 it means he has embarked on a new life as an adult and will take more responsibility for his family, his country and the world at large.

Tencent celebrated its 20th anniversary in 2018. For the Internet industry, after two decades of rapid development, it has entered a new phase which calls for rethinking and adjustments. In a broader scope, China also celebrated its 40th anniversary of reforms and opening-up in 2018 as the country ushered in a new era of digital transformation.

This is a meaningful convergence of events. As one of the key founders of Tencent, every time I return to Shenzhen, the city where the Company began, I can’t help but ask myself: How did we manage to develop all the way from a small team working on network pagers to a platform which nowadays has tens of thousands of employees, provides services to more than one billion customers and has an impact across every sector and industry?

In my 2018 New Year remarks, I said we should attribute Tencent’s success primarily to this particular era. To be more specific, Tencent has directly benefited from digitalisation in the past two decades. This unstoppable wave of digital transformation has not only reshaped how we live and work, but will also have a great impact on our future.

Digitalisation is like a giant, exploratory passenger ship, carrying every person, family, business and social organisation into uncharted seas. This voyage is destined to be full of hope and promise, but also not without challenges. With this in mind, we can fairly say that digitalisation is the greatest source of social good in our time. Recognising the power of digitalisation, in 2017 we have set a clear goal to become the digital assistant for all industries and are unwaveringly committed to fulfilling this mission.

We believe digitalisation is capable of enhancing the quality of public administration, thereby benefiting society through the intelligent use of technology. In 2018, we implemented smart public administration projects across 22 provinces in China to help optimise municipal services focused on poverty alleviation, civil affairs and taxation services. Among them, Yue Sheng Shi, the Weixin (also known as WeChat in international markets) Mini Programs launched by the Tencent-backed Digital Guangdong initiative, were used by one out of every 12 residents of Guangdong province.

Digitalisation has the potential to drive the transformation of different industries, promote industry upgrades and deliver multiple benefits. As of 2018, our smart applications covered a majority of sectors, including retail, transportation, education, healthcare and elderly services. For example, we partnered with Yunnan province to launch China’s first provincial smart travel platform – Go-Yunnan – to help promote the travel industry, provide services for tourists and boost the economy.

Digitalisation has also created more and better job opportunities for people. In 2018, Weixin generated RMB240.2 billion from information consumption, and RMB419.8 billion from non-information consumption. The entire Weixin ecosystem has provided 22.35 million job opportunities, with Weixin's Mini Programs being the leading job generator, creating 1.82 million job opportunities.

We believe strongly in the power of digitalisation, and have been thinking deeply about the ethics of technology. Over the past year, we actively advocated the idea of "Tech for Good" and implemented it in our daily operations. We hope "Tech for Good" can become part of Tencent's vision and mission. We also look forward to working together with industry partners to promote shared values, embrace our social responsibilities and advocate for responsible behaviour in this digital era. Together, we can build an inclusive, reliable and sustainable smart society.

We believe technology brings many benefits to humanity. However, we should steward them wisely, hedging against abuses and avoiding malicious applications. Regarding our vision of how technology can be a force for good, we have already taken a number of important steps. For example, we have used technology such as YouTu image recognition, a product of Tencent's YouTu Lab, to help more than 1,000 families find their missing family members in the past two years. We are also committed to continuously upgrading our Parental Guardian Platform, which entails working together with families and schools to build an effective mechanism to prevent game addiction among minors. QQ, Weixin, QQ.com and other products have developed barrier-free designs to move digitalisation beyond physical limits.

In 2007, we established the Tencent Charity Foundation, China's first Internet enterprise-backed charitable foundation. As of the end of 2018, Tencent Charity had connected hundreds of millions of donors and raised over RMB5 billion for more than 50,000 projects. By integrating digital capabilities into the practice of traditional philanthropy, Tencent acquired a wealth of experience and is committed to the development of a new Chinese model of philanthropy that uses the Internet to empower charity work.

In the area of poverty alleviation and rural revitalisation, we are making use of technology to create positive social impact. Over 90% of the fundraising projects on Tencent's charity platform are related to poverty relief and rural development. Launched in 2015, Tencent's WeCounty platform uses Internet technology to enhance information, wealth and emotional connection in rural areas. As of the end of 2018, WeCounty had reached nearly 10,000 villages in 28 provinces across China, with over 2.32 million villagers connected to the cloud.

These examples demonstrate the power and potential of digital technology. As the beneficiaries of this digital era, we should be grateful for the pioneers who have dedicated their entire lives in pursuit of technological advancement for the betterment of mankind. We should embrace and carry forward their unshakable faith in science, as well as their spirit of self-sacrifice. In such a spirit, Tencent worked with several leading scientists to launch the Xplorer Prize in 2018, to inspire young scientists to conduct scientific research and pursue frontier technology development.

The power of digitalisation has been thoroughly unleashed. On the occasion of publishing our 2018 Tencent Corporate Social Responsibility Report, I would like to take this opportunity to share a thought with all my colleagues and partners across all professions: digitalisation is the greatest source of social good in our time. For Tencent, a company which has just crossed 20 years of development, our mission is to become the digital assistant for every industry and sector, to ensure everyone benefits from the fruits of digitalisation.

EMBRACE THE ERA OF INDUSTRIAL INTERNET

LAU, CHIPING (Martin Lau)

President of Tencent

刘炽平

On the occasion of Tencent's 20th anniversary, we remain humble and open-minded. We are committed to playing the role of digital assistant to help different partners thrive in this era of Industrial Internet.

The change of seasons, the flow of rivers and the water cycle – these natural phenomena serve as a reminder for us at Tencent that we should never cease to evolve. Over the past two decades, our capabilities have continuously evolved and the social value we have created has amplified and further diversified. Today, we are ready to carry more social responsibilities on our shoulders.

In the era of the Consumer Internet, adhering to the strategy of "Connecting Everything", Tencent provides a wide range of Internet services for its over one billion users and a large number of industry partners. Today, Tencent has created an open and inclusive ecosystem through various collaborations. With the ongoing convergence of the Consumer Internet and the Industrial Internet, Tencent's services have undergone unprecedented upgrades, both in breadth and in depth, which are creating impact across almost every industry and profession.

For example, Weixin Mini Programs had connected more than 200 offline service sectors just one year after its debut in 2017. Leveraging the cloud, big data, AI, the Internet of Things (IoT) and other advanced technologies, our security solutions protect against a wide range of scenarios, spanning public administration, industry development and people's daily lives.

Tencent nurtures a vibrant and diverse ecosystem. However, no ecosystem can thrive without the contribution of all parties in it. In a digital era where everything is connected, only if Tencent maintains an open-minded attitude and creates an inclusive ecosystem for its partners, will it experience greater growth and create more value. Only in this way will we fulfil our social responsibilities more effectively.

Based on reflection about our development to date and our faith in the promise of this digital era, Tencent initiated its third major strategy upgrade on 30 September 2018. We pledged to play the role of digital assistant and usher in the era of the Industrial Internet. We established a new Cloud and Smart Industries Group. Centred around the cloud, we will integrate our technological capabilities and products across AI, big data and security. We also established a Platform and Content Group to converge our internal platforms and content resources.

The restructuring is expected to bring new possibilities to Tencent's future development.

We promote cloud applications. By integrating our core capabilities and resources in technology, data, content and platforms, we are helping to enhance the quality of public administration by bringing convenience to both businesses and citizens. As of the end of 2018, our cloud services had been applied across 22 provinces in areas such as social security, civil affairs and taxation. Major projects include Digital Guangdong and Go-Yunnan which have become important forces in China's digital transformation.

We assist every industry, such as transportation, healthcare, finance, retail, education, culture, tourism and charity, to achieve better connectivity, provide them with smart tools and facilitate their digitalisation initiatives. For example, Tencent Transit QR Code has been applied in more than 100 cities in China; Tencent Miying, a product that leverages AI technology to increase the efficiency of screening for early stage diseases, has been rolled out across over 100 large-scale and high-ranking hospitals, providing services for more than one million patients.

We promote the rejuvenation of culture. In response to user demands and societal expectations, we have developed high-quality culture and content products. At present, Tencent is operating an all-inclusive content ecosystem, spanning games, literature, videos, music, news and comics. Tencent is also planning to embed technology into traditional culture, creating digital cultural programs such as A Singing Masterpiece, Wisdom Tips and Mr. Bowu, to help people appreciate Chinese culture.

On the occasion of Tencent's 20th anniversary, we remain humble and open-minded. We are committed to playing the role of digital assistant to help different partners thrive in this era of Industrial Internet.

A RATIONAL APPROACH TO CHARITY

CHEN, YIDAN (Charles Chen)

Co-founder of Tencent
 Founder and Honorary President of Tencent Charity Foundation

A handwritten signature in blue ink, consisting of stylized Chinese characters '陈一丹'.

Tencent adopts a rational approach to charity and promoting care and responsibility in society. We pledge to drive "Tech for Good" and create a better life for everyone in the new era.

Tencent celebrated a heartwarming 20th anniversary in 2018: the total amount of funds raised across our online charity platform has exceeded RMB5 billion, benefiting over 50,000 charity projects. Innovative initiatives such as Weixin Charity Platform, Steps for Charity, Hometown Support and Cool-off Mechanism, were recognised by the Ministry of Civil Affairs of China. This experience has proved valuable for the development of a Chinese model of Internet-based charity.

As China's first Internet enterprise with a charity foundation, Tencent is committed to building trust through technology, supporting the development of philanthropy and promoting a rational charity culture. The seed of philanthropy was planted at the initial stage of the Company's development and has since grown into a towering tree.

Looking back, we are increasingly assured that only rational charity can bolster the development of Internet-based charity in the long term.

We encourage the public to devote themselves to the practice of charity and safeguard their precious donations. After the 2008 Wenchuan Earthquake in Sichuan province, we opened the online fundraising channel to facilitate public donations. As of the end of 2018, Tencent Charity Platform has received more than 220 million monetary donations and recorded over 800 million donations in the form of steps walked for good causes. Since last year's 9.9 Giving Day, we launched a cool-off mechanism to remind donors to review the details of their donations carefully and adopt a rational approach to participating in philanthropy.

On the industry front, Tencent has positioned itself as the digital assistant. With innovative fundraising methods, open product capability and large resource investments, we help charitable organisations enhance their level of professionalism. We have developed different approaches to increasing transparency and imposing tighter information disclosure requirements for the industry.

We also actively engage different organisations. At the 9.9 Giving Day last year, we invited charity practitioners, media professionals and scholars to set rules for organising charity activities. Since 2016, we have helped launch the annual China Internet Good Summit, working together with different parties to discuss the development of charity to promote a more rational and efficient charity ecosystem.

Such rationality is rooted in Tencent's technology, culture and sense of responsibility. Our innovations in the area of Internet-based charity rely heavily on core Tencent technologies, such as mobile payments, Mini Programs and big data, as well as on our high-quality content and platforms. It has always been the core of Tencent's social mission to leverage technology to improve people's quality of life and create greater social value.

However, Tencent also acknowledges that technology is a double-edged sword. Such is why we proactively call for attention to the ethics of technology and advocate the idea of "Tech for Good".

Internally we encourage innovative technology to address social problems and create products for charity. For example, we developed new QQ voice functions to help visually impaired people add friends, understand the meaning of received emojis and distribute red packets. The Yue Sheng Shi Mini Programs apply facial recognition to help people with aphasia complete the identity authentication process. The Rumor Filter Assistant Mini Programs aim to prevent the proliferation of rumors on the Internet.

We also collaborate with different parties to promote positive social values through technology applications. For example, we worked with parents and teachers to build a Parental Guardian Platform to help teenagers cultivate healthy game habits. We have delivered digital solutions aimed at giving greater visibility to the Forbidden City, Dunhuang and The Great Wall, creating a sense of pride among users on these perennial landmarks of traditional Chinese culture. We formed a strategic partnership with World Wide Fund for Nature ("WWF") to promote environment protection using digital technology and contribute to the conservation of the Greater Bay Area environment.

We are fortunate to live in this new era, full of love and goodwill. The pace of technological innovation is unstoppable and China's charity industry is seeing increased development. In the coming decade, what sparks can technology and charity create? What impact will they bring? The answer is right in front of our eyes. Tencent adopts a rational approach to charity and promoting care and responsibility in society. We pledge to drive "Tech for Good" and create a better life for everyone in the new era.

TENCENT'S CSR PHILOSOPHY

Since our establishment in 1998, we have worked to integrate CSR objectives into our corporate operations, making CSR a core part of our development strategy. We have also connected our stakeholders to facilitate regular interaction and cooperation to address social issues. These initiatives are helping to build a Tencent-based CSR ecosystem and enable the digitalisation of China.

TENCENT'S CSR VISION

Over the past two decades, Tencent has consistently adhered to its initial aspirations to provide users with better products and services, become the most respected Internet enterprise and enhance the quality of peoples' lives through Internet services. Tencent has continued to refresh its strategy, keeping pace with the development of the industry and striving to satisfy peoples' desire for a fulfilling life.

2005	With the emergence of personal computers, Tencent was faced with diverse demands from hundreds of millions of netizens. The Company focused on creating value for users.
2012	In the era of mobile Internet, cell phones became the medium that connected people, devices and services. In order to ensure users could enjoy the convenience of the Internet at all times and places, Tencent launched its strategy, "Connecting Everything", and worked together with partners to promote the development of the mobile Internet.
2018	In the transition from the Consumer Internet to the Industrial Internet, Tencent played the role of a Connector, Toolbox and Ecosystem co-developer, striving to become a tailored digital assistant for different industries. With our vision of and mission to promote "Technology + Culture" and "Tech for Good", we pledge to increase our capabilities in the process of serving industry, our users and the public.

MILESTONES

ABOVE AND BEYOND 20 YEARS OF RESPONSIBILITIES

11 NOVEMBER 1998

Tencent's journey began in a 30-square-metre office in Shenzhen. Since the Company's inception, our purpose, vision and mission have been to provide users with better products and services, become the most respected Internet enterprise and enhance the quality of peoples' lives through Internet services.

16 JUNE 2004

Tencent was listed on the Stock Exchange of Hong Kong. The annual financial and environment, social and governance reports Tencent has been publishing since its listing have facilitated transparent communications between the Company and its investors.

2005

Tencent completed its first restructuring. The Company set up product-oriented business units.

THE BEGINNING (1998-2005)

2006

Tencent established its first employee volunteer team. Employees recruited some 20 volunteers using a bulletin board system (BBS) to kick off the Company's first clothing donation event for disaster-stricken areas. Afterwards, Tencent established a volunteer team and organised employee volunteer groups.

26 JUNE 2007

The Tencent Charity Foundation was registered with the Ministry of Civil Affairs of China. Tencent became China's first Internet enterprise to set up a charity foundation. The Company created a new form of Internet-based charity in China. The following year saw exponential growth in charitable activities organised by ordinary people on the Internet.

11 NOVEMBER 2008

Tencent published its first CSR report disclosing its social responsibility initiatives. The report covered the 10 years from 1998 to 2008, recording the Company's CSR activities over the first decade since its inception.

ACCELERATION (2006-2011)

2012

Tencent completed its second restructuring. Responding to the development of the mobile Internet, the Company launched the strategy of "Connecting Everything".

9 SEPTEMBER 2015

Tencent launched the first society-wide charity day – 9.9 Giving Day. By introducing a range of features, such as mobile payments, social scenarios and interactions, Tencent raised the public's awareness of and passion for charity work, creating an occasion for everyone to take part in charitable activities.

CONNECTION (2012-2017)

30 SEPTEMBER 2018

Tencent completed its third restructuring and established six business groups surrounding the Consumer Internet and the Industrial Internet. Through its "Technology + Culture" approach, Tencent aims to provide diverse Internet products and services for the government, industries and the public.

9 NOVEMBER 2018

Tencent celebrated its 20th anniversary. Adhering to its "Connecting Everything" philosophy, Tencent has continued to transform and upgrade its business model to create value for every industry and sector. At the same time, Tencent holds close to its initial goal to contribute to society through practical means.

17 DECEMBER 2018

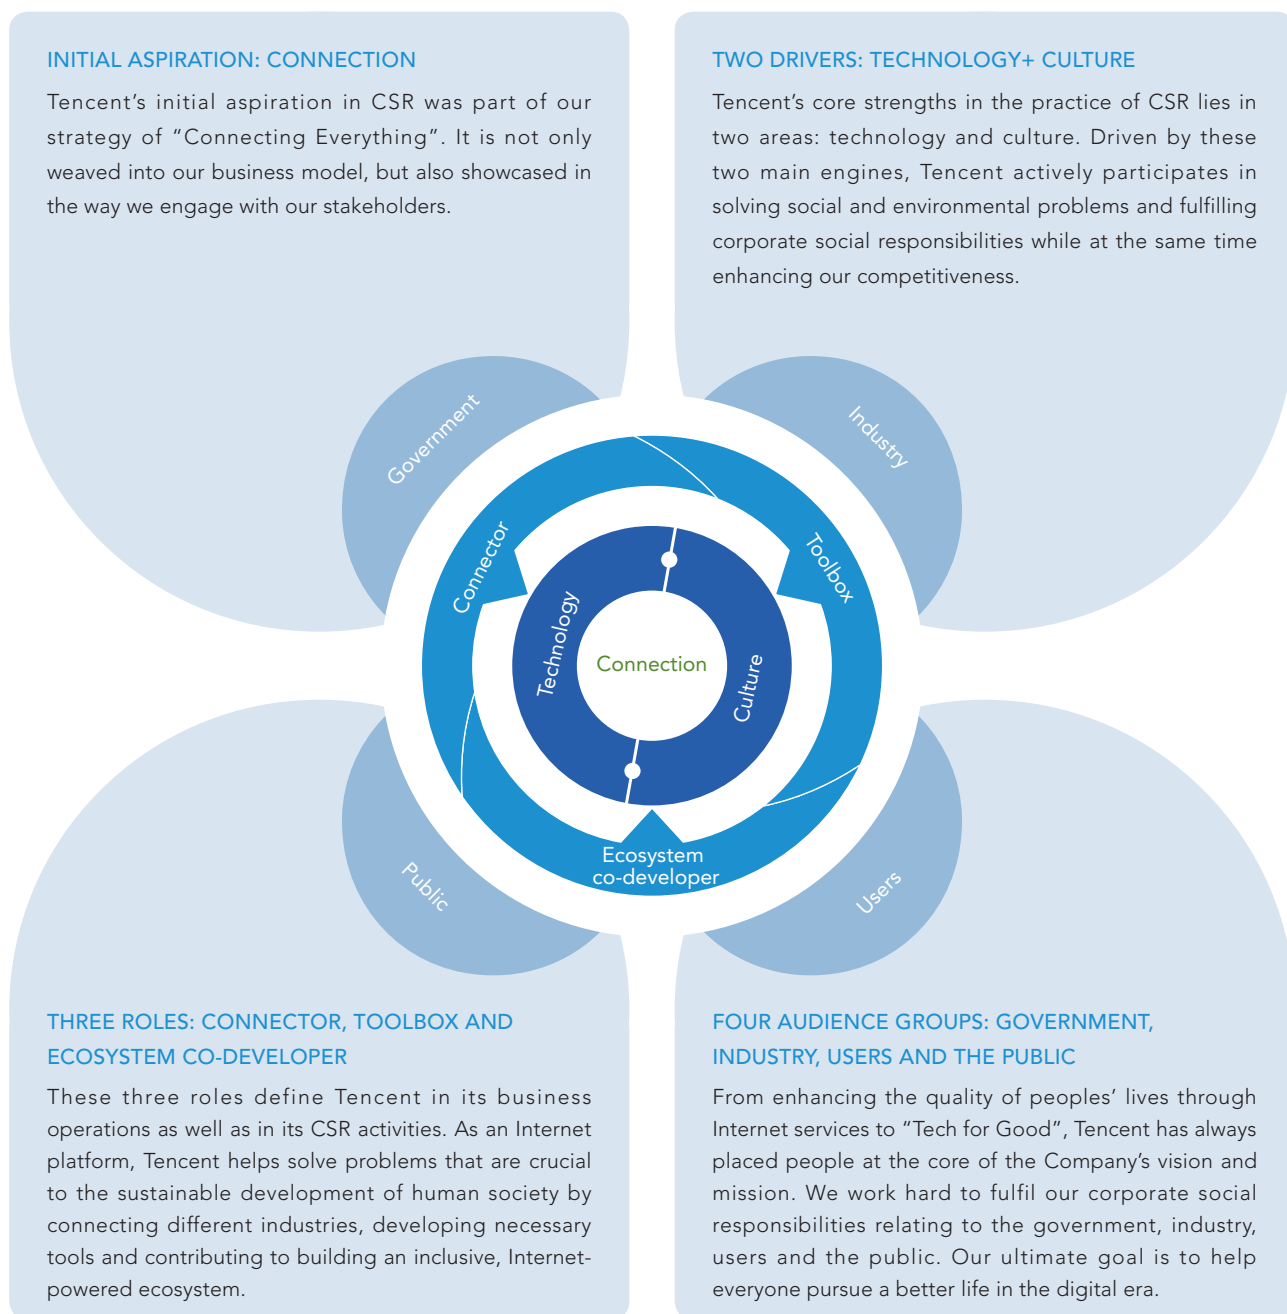

Tencent organised the third China Internet Good Summit in Beijing to discuss the future development of China's Internet-based charity. A record representation from 115 organisations in the philanthropy industry participated in the summit. The first instance of the summit was held in 2016, and was initiated by Tencent and other charity foundations, including the Narada Foundation. The summit called for organisations from a wide range of industries to work towards developing a more professional, efficient and regulated charity ecosystem.

NEW MOMENTUM (2018)

TENCENT'S CSR STRATEGY

AN OVERVIEW OF THE TENCENT CSR MODEL

From 1998 to 2018, Tencent evolved significantly, keeping pace with industry developments and the changing needs of users and consumers. Our approach to CSR can be summarised as follows:

THE FOUR DIMENSIONS OF TENCENT'S CSR STRATEGY

From Tencent's perspective, CSR is inextricably linked with corporate development. Realising the mission of "Tech for Good" serves as a motive for Tencent's sustainable development. Therefore, the Company has established a designated CSR department to execute CSR strategies and appointed CSR liaison officers in every department and region.

CORPORATE OPERATIONS

- Operate in compliance with applicable laws and regulations
- Operate with integrity and protect shareholder interests
- Care for employees and provide them with training and career development opportunities
- Establish a diverse corporate culture

ENVIRONMENT

- Make environmental protection a core priority
- Adopt sustainable investment strategies
- Remain committed to environmental sustainability

COMMUNITY

- Adopt an approach to charity work
- Promote innovation and the establishment of a legal framework to protect intellectual property rights
- Encourage industry collaboration by building and keeping an open platform

USERS

- Listen to the voices of our users and continuously work to enhance product and service quality
- Establish relationships with users based on trust and protect their legitimate interests
- Prioritise the interests of users in business decision-making processes

CORPORATE GOVERNANCE

STAKEHOLDER MAPPING

We value the support of all our stakeholders. To highlight this, we have created a stakeholder map and described our responsibilities to each of them below:

TENCENT'S STAKEHOLDERS AND ASSOCIATED RESPONSIBILITIES

Stakeholder	Primary responsibilities	Additional responsibilities	Communication and implementation
<p>USERS</p> 	Provide stable and reliable Internet-based products and services.	<ul style="list-style-type: none"> Respond promptly to users' needs and continuously enhance service quality. Create new lifestyle possibilities for users with innovative products. 	<ul style="list-style-type: none"> Develop the Company's "Technology + Culture" strategy based on users' needs, with the aim to enhance user experience. Innovate new products, technology and architecture to provide secure and convenient services in support of users' mobile lifestyles.
<p>SHAREHOLDERS</p> 	Create a sound operating model and generate investment returns for shareholders.	<ul style="list-style-type: none"> Disclose financial and operational information in a timely and accurate manner, in compliance with all relevant rules and regulations. Communicate with investors through a variety of channels, including face-to-face meetings. 	<ul style="list-style-type: none"> Create a sound and well-established Board of Directors and produce financial reports on a quarterly basis. Convene regular shareholder meetings and extraordinary general meetings. Set up a dedicated Investor Relations department to actively communicate with shareholders and investors.
<p>EMPLOYEES</p> 	Develop a comprehensive employee benefits system.	<ul style="list-style-type: none"> Care for and nurture employees; provide them with training and career development opportunities. Foster a diverse corporate culture. 	<ul style="list-style-type: none"> Set up a Human Resources Department to oversee employment policies and employee benefits. Form an Occupational Health and Safety (OHS) Committee to promote work safety and hygiene standards. Build and manage the Tencent Academy to provide ongoing training opportunities for employees.

TENCENT'S STAKEHOLDERS AND ASSOCIATED RESPONSIBILITIES

Stakeholder	Primary responsibilities	Additional responsibilities	Communication and implementation
<p>GOVERNMENT</p> 	<p>Pay all relevant taxes in accordance with the law.</p>	<ul style="list-style-type: none"> • Support and comply with national laws and regulations. • Contribute to economic development, thereby solving social and livelihood issues. 	<ul style="list-style-type: none"> • Establish a Government Affairs Department to coordinate, plan and implement government-related projects.
<p>BUSINESS PARTNERS</p> 	<p>Conduct business responsibly and prevent bribery and corruption.</p>	<ul style="list-style-type: none"> • Regularly communicate with business partners. • Help our partners grow. 	<ul style="list-style-type: none"> • Hold regular meetings with suppliers and partners to explore growth opportunities and remove any barriers to successful collaboration. • Help business partners grow. • Prevent behaviours that could compromise the interests of our partners by setting up an independent anti-bribery and corruption task force.
<p>CHARITY ORGANISATIONS</p> 	<p>Provide necessary financial support. Make contributions through participation and support financially.</p>	<ul style="list-style-type: none"> • Innovate the way in which charity activities are conducted to increase reach and impact. • Help charity organisations grow. 	<ul style="list-style-type: none"> • Build an online donation platform and bring together small charity projects with public charity funds. • Provide funding and fundraising platform to support the development of charity organisations.
<p>COMMUNITIES IN WHICH WE OPERATE</p> 	<p>Use Internet-based tools to support community development.</p>	<ul style="list-style-type: none"> • Allocate donations for specific causes. • Implement charity projects in underserved areas. 	<ul style="list-style-type: none"> • Make direct donations in support of community development projects through the Tencent Charity Fund; provide all necessary funding and resources. • Leverage our Internet technology capabilities to facilitate smart communities development.

TECH FOR GOOD

TECHNOLOGY AS THE ASSISTANT IN IMPROVING PEOPLE'S LIVES

BECOMING THE DIGITAL ASSISTANT OF EVERY INDUSTRY

In September 2018, Tencent's Co-founder, Chairman and Chief Executive Officer Pony Ma raised two questions: how will breakthroughs in fundamental technologies over the next 10 years affect the Internet industry and how will the integration of innovations in the Industrial and Consumer Internets change our lives? These questions have generated widespread discussion among Internet users. The Internet has already begun transforming traditional sectors, bringing profound changes to existing models of production. Embracing this trend, Tencent is striving to become the digital assistant for traditional industries, helping those sectors of the real economy to transform their businesses and compete more effectively.

In this new era of the Industrial Internet, Tencent believes that capturing new growth opportunities will not only aid the Company's development, but also help its partners to thrive. The Company is consolidating its strengths in the Consumer Internet space and embracing opportunities in the Industrial Internet. Building on its core capabilities in cloud computing and supporting digital services, Tencent aims to help every industry become smarter.

To do this, Tencent will focus on understanding the relations between the Internet and the needs of different industries, in

order to integrate digital technology across various verticals. The Company's intention is to connect its one billion users to traditional industries and provide them with the best digital tools.

Tencent launched the Cloud Starter program in November 2018. In the next three years, Tencent will work with its partners to leverage five key catalysts: capital, resources, technology, capabilities and opportunities. It will build on its technological infrastructure – the cloud, AI and big data – to help Internet, finance, retail, education, healthcare, transportation and other enterprises in traditional sectors and public administration to upgrade. This will enable them to share the benefits brought forth by the development of the Internet. By doing so, Tencent is also bringing the convenience of digital life to more users, creating more value for society and contributing to the digital development of China.

IMPROVING PEOPLE'S DIGITAL LIVES

Motivated by its aspiration to become the digital assistant for every industry, Tencent shares its technological innovations with ecosystem partners to help address the pain points for traditional industries such as healthcare, education, retail, transportation and tourism. The Company leverages technologies including data analytics, cloud computing, artificial intelligence and mobile payments to develop products that address the most important challenges faced by traditional industries.

SMART HEALTHCARE BRINGS SECURE AND EFFICIENT MEDICAL SERVICES

One of Tencent's earliest initiatives to digitalise China's healthcare system was the launch of Digital Social Security Card and Digital Healthcare Card. Ever since, Tencent has been gradually improving its medical science information platform and enhancing digital infrastructure for hospitals. It has also explored and conducted research into the application of AI technology for healthcare, driving the development of a secure, efficient and smart healthcare system. Tencent also helps to alleviate healthcare burdens on the social system, which is hampered by an aging population and information silos due to geographic inaccessibility.

The Weixin-based Digital Healthcare Card is a unique, lifelong and secure medical record for patients that can be used across China. Patients' records are open and can be shared among hospitals, minimising redundant check-ups, improving doctors' working efficiency and saving medical expense for patients. In September 2018, Qinghai province leveraged Tencent's technology to pilot Digital Healthcare Cards. By connecting the card management system in the province and the Weixin service accounts of different hospitals, card issuance efficiency has significantly increased. Data and information from 12 hospitals in the province were connected within two months.

The popularisation of Smart Healthcare, including online registration and consultation, has led to increasing concerns over the security of healthcare data. Outdated security systems and risk management mechanisms are inadequate to protect the enormous volume of sensitive healthcare data. To plug this critical security loophole, Tencent has launched initiatives to protect medical information by detecting risks, safeguarding network perimeters, terminals and the web, and promoting service security. Such initiatives aim to help healthcare organisations avoid economic loss, reputational damage and patient privacy leaks.

Inadequate high-quality medical resources and their uneven distribution are two major problems that need to be addressed in China's healthcare industry. There is also room to improve the accuracy and efficiency of the diagnosis process. Recently, Tencent has applied innovative AI applications such as AI medical image analysis, AI-aided consultation and evaluation and electrocardiographic analysis to various healthcare segments to help doctors diagnose diseases quickly and accurately. In addition, to cope with prevailing problems such as a burdensome registration process, suboptimal consultation experience and inefficient payment methods, Tencent has used digital technology to upgrade hospital operations and optimise the consultation process to enhance hospitals' service efficiency and the patients' experience.

CASE STUDY

TENCENT MIYING ASSISTS DOCTORS IN SCREENING FOR CANCER

Tencent Miying, an AI-based medical image analysis technology, helps increase the accuracy of diagnosing early-stage cancers. Tencent Miying uses the "Technology + Charity" model, combining the strengths of Tencent AI Lab, Youyu Lab and other AI capabilities to enable AI medical image analysis and AI-aided consultation. Besides cancer, Tencent Miying is also used to detect and predict the risk of occurrence for more than 700 diseases. For example, it takes no more than four seconds for Tencent Miying to screen for esophageal cancer, with an accuracy of over 90%.

As of October 2018, Tencent Miying had been applied in over 100 large-scale and high-ranking hospitals in China, helping doctors to read more than 100 million medical images and serve more than one million patients. The technology has already screened 150,000 cases of high-risk lesions.

HOW TENCENT MIYING IMPROVES HEALTHCARE IN CHINA

The AI-aided Early Cancer Screening Charity Program was launched in Jieyang, Guangdong province, on 14 December 2017. Enabled by Tencent Miying, this first-of-its-kind charity initiative provided citizens of Jieyang with an early esophageal cancer screening service.

In April 2018, Tencent partnered with AstraZeneca to launch the gastrointestinal cancer control platform, which aimed to pilot a healthcare alliance and the early screening of gastric cancer.

In July 2018, Tencent joined a program initiated by charity organisations, hospitals and research institutes in Guangdong. The program used AI technology to enable early screening, diagnosis and treatment of lung cancer.

Treating diseases requires knowledge of various details, such as the patient's age, gender, lifestyle and genes. Individual doctors may not have adequate clinical experience to diagnose the disease and prescribe treatments. To equip doctors with more knowledge and experience, Tencent has collaborated with healthcare organisations to build a communications platform that encourages the sharing of medical research results.

To support medical research and the sharing of advanced media information, on 5 August 2018, Tencent worked with the Chinese Society of Clinical Oncology (CSCO) to establish an oncology medical information platform.

On 18 November 2018, Tencent, together with several hospitals and healthcare organisations, launched a research project centered on building an AI-based clinical decision support system, with an aim to increase the availability, accuracy and regularity of healthcare.

PROVIDING RELIABLE AND TRUSTWORTHY MEDICAL INFORMATION

Tencent’s research shows that 39% of patients conduct online information searches about their illness before consulting a doctor. However, fragmented, promotional and potentially misleading online information may result in delayed treatment, affecting patients and their families.

To provide reliable and trustworthy online medical information, Tencent collaborated with highly-recognised healthcare organisations to launch the first Internet-based medical science information platform – Tencent Medipedia – providing a reliable channel of communication between patients, doctors and hospitals. In 2018, Tencent Medipedia invited leading medical science practitioners, well-known medical experts and industry associations to provide authoritative and in-depth content for the platform, extending its coverage from common diseases to critical and rare illnesses. Information is organised according to the consultation process to provide patients personalised suggestions based on their specific conditions.

On 2 August 2018, Tencent announced an exclusive strategic collaboration with WebMD, a leading international healthcare information platform. Under the collaboration, WebMD has granted Tencent exclusive authorisation to access and use its professional medical information and health science content. At present, Tencent has obtained authorisation to use the Chinese version of 60,000 WebMD medical science articles.

As of the end of 2018, Tencent Medipedia provided trustworthy medical information on more than 480 common diseases, 84 common symptoms and 61 first aid techniques. More than 900 experts and nearly 100 first-class hospitals have published tens of thousands of medical science articles on the platform, creating a comprehensive, systematic and valuable medical knowledge encyclopedia for patients and the public.

SMART RETAIL TO CONNECT MERCHANTS AND CUSTOMERS

Tencent uses its technology to help build customer assets, provide personalised recommendations and targeted promotions, facilitate mobile payments and enable easy access to customer rewards. This enhances the customer shopping experience and helps companies optimise their store deployment and achieve precision marketing.

Converging data from various channels, Tencent leveraged its advantages in traffic, data analysis, technology and its ecosystem model to develop smart retail products, such as including Tencent Brand Management, Tencent YouMall and marketing risk management tools, connecting online and offline retail. The Company is working to digitalise the retail industry by providing a secure and reliable structure for merchants and assisting offline retailers to increase operational efficiency in marketing, store management and data analytics.

- 

ONE CORE
customer-centric digital upgrades
- 

TWO GOALS
helping merchants to digitalise operations and offering new consumer experiences
- 

THREE ELEMENTS
connection, transformation, experience
- 

SEVEN DIGITAL TOOLS
Weixin Pay, Tencent Cloud, Weixin Official Accounts, a wide range of entertainment-related intellectual property, Mini Programs, WeChat Work, Tencent Marketing Solution.

TENCENT SMART RETAIL

Tencent is committed to playing the role of a digital assistant. Based on the features of each industry and the demands of corporations, we provide a full range of personalised services for companies to increase operational efficiency and reduce costs. Leveraging the capabilities of Tencent Cloud, offline stores can predict the sales potential of different locations and thus pick the most suitable store site. By connecting with billions of users through Weixin ecosystem, Tencent helps brands and retailers maximise the commercial potential and build digital assets.

CASE STUDY

8.8 SMART LIFE DAY

8.8 Smart Life Day, the first global mobile payments festival, was launched by Weixin Pay on 8 August 2018. 8.8 Smart Life Day advocates for a great number of smart life applications, such as QR code payments, social network transactions, authorised auto payments, bill payments, self-help ordering, Tencent Transit QR Code Mini Programs, Weixin Payment Collection for Micro and Small Businesses and self-help purchases to create a more intelligent lifestyle. 8.8 Smart Life Day also aims to promote this smart lifestyle to overseas markets.

SMART TRANSPORTATION TO ENSURE TRAVEL SAFETY

To enhance driving safety, Tencent worked with an automotive partner to develop the All in Car cloud-based platform, which alerts drivers of mechanical malfunctions and reminds them to get regular check-ups to enhance travel safety. In addition, Tencent has developed smart applications to transform cars from a mere means of transport into an intelligent mobile space for users. These applications also provide a holistic solution spanning different segments of the automobile industry, such as design and manufacturing, sales, transportation and customer service to help enhance the industry's operational efficiency.

Smart transportation is a holistic solution through which Tencent provides a fulfilling commuting experience for customers. It is also an infrastructure platform for Tencent to assist the transportation industry to upgrade its capabilities. Leveraging Tencent's AI technology and Tencent Cloud, automobile enterprises can build their Internet of Vehicles (IoV) platforms and offer smart services for their customers.

Car-sharing and ride hailing has become an essential part of people's daily lives in modern society. Tencent collaborates with leading industry players such as Didi Chuxing and Meituan Dache to address customer demands and the pain points of the smart transportation industry by introducing customised location-based services (LBS). With tailored maps provided by Tencent, drivers can concentrate better on the roads; with accurate distance calculation tools, itinerary on schedule is secured; innovative location display and animation deliver an optimised user experience; and smart pick-up location recommendations effectively reduce customer waiting time.

SMART EDUCATION TO ACHIEVE AN INTELLIGENT FUTURE

China's universities have undergone continuous expansion. However, disconnected online and offline resources have limited the quality of campus management and services. To address this problem, Tencent developed the smart campus solution, providing support for campus services and administration in all aspects. Such efforts helped reduce information isolation, service dysconnectivity, enhance efficiency and remove communication barriers.

Tencent Smart Campus connects schools, administrative departments, teachers and students to create a convenient and efficient digital campus. With smart notification solutions, teachers and students can receive school messages and news directly on their mobile phones. Class schedule and empty classroom inquiry functions enable students to enjoy a better study environment. Other solutions of Tencent's Smart Campus include mobile payments and digital connections between office, home and school.

TENCENT SMART CAMPUS CORE SERVICES AND TECHNOLOGIES

INTEGRATED CROSS-PLATFORM SERVICES

Seamlessly switches between a range of products, such as Weixin Official Accounts, Mini Programs and Campus HTML 5.

TENCENT CAMPUS QR CODE

Generates a one-time QR code to authenticate students' identity in a variety of scenarios, including entering dormitories, shopping and signing into classes.

POWERFUL NOTIFICATION CAPABILITIES

Users can receive push notifications through different channels, including digital cards, Weixin Official Accounts and messages.

As of the end of 2018, Tencent Smart Campus covered:

Close to **180,000**

schools' Weixin official accounts

5,800

schools

It handled **700 million**

customer requests per month

INTEGRATE EDUCATIONAL RESOURCES TO REALISE EDUCATION EQUALITY

Tencent Classroom is an online vocational education platform. It provides courses spanning a wide range of disciplines, including IT, Internet, design and creation. It caters to users' needs, including continuing their studies, obtaining professional certifications, studying overseas and studying for personal interests. Tencent Classroom breaks down the barriers of time and space to offer high-quality educational resources to every user and helps tackle the uneven distribution of educational resources. As of the end of 2018, more than 50,000 educational organisations and teachers had provided over 100,000 online courses for 300 million users in Tencent Classroom.

Tencent is committed to promoting education equality through technology that enables inclusivity and makes high-quality educational resources accessible for users of different ages and needs. The Company is striving to narrow the digital divide and advance the development of the education industry.

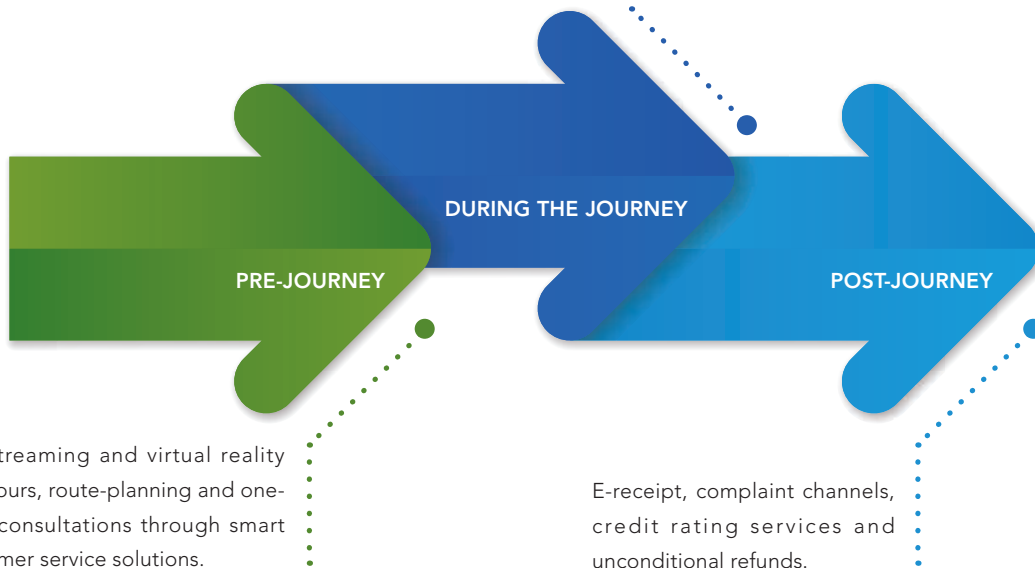

SMART TOURISM TO PROMOTE A MORE REGULATED TRAVEL INDUSTRY

Crowds of tourists, unregulated commodity prices and unprofessional tour guides at China's popular tourist destinations have created negative perceptions of the travel industry. Tourists' rights are often not protected when disputes happen. To enhance tourists' travel experience, Tencent collaborated with Yunnan provincial government to launch China's first provincial smart travel service platform, Go-Yunnan. Leveraging Tencent's various technologies such as Mini Programs, a wide range of Weixin services and Tencent AI Lab, the platform helps build the infrastructure for smart travel, protects tourists' rights and provides safe and convenient services for tourists.

GO-YUNNAN SERVICES

Check into hotels by scanning a QR code or using facial recognition. Buy bus and coach tickets with a QR code. Enter tourist destinations through facial recognition. Look for parking lots, toilets and electronic tour guides on the Mini Programs. Send souvenirs home through express delivery services. Ask for help from government administration services on a mobile platform.

As of 31 December 2018, through its app, Mini Programs and other smart travel resources, Go-Yunnan had served two million users and provided more than 20 million instances of service.

SMART PUBLIC ADMINISTRATION SERVICES TO PROVIDE CONVENIENCE FOR EVERYONE

Digitalisation has become a way of life in China and has improved the efficiency of public administration. Different levels of government are using digital tools to enhance the quality of administration and the services they provide. Becoming the digital assistant of public administration has been a core of Tencent’s social responsibility over the course of its development.

Tencent, leveraging its cloud computing capabilities, strong social networking platform and enormous user base, has built an integrated public administration cloud platform. The platform is designed to create a convenient experience for the general public. It helps users find the right services, simplifying paperwork, saving travel time to physical service outlets and queuing for services. Tencent aims to use innovative technology to help enhance the efficiency of administration services and the satisfaction of the general public.

SMART TAXATION TO DELIVER DIGITALISED TAX SERVICES

Tencent has launched the WeTax Refund Mini Programs to streamline the complex and time-consuming tax refund process for tourists on their return to China. In addition to tax refunds, Tencent has also made use of its platforms and products, such as Weixin Official Accounts, Mini Programs and Weixin Pay, to connect taxpayers with tax departments and integrate online and offline tax-related services. This enables taxpayers to use such services at all times and places, helping to increase the digital capability of tax services.

In 2018, Tencent worked with 33 tax authorities to develop digitalised tax services and bring convenience to taxpayers.

SMART SOCIAL SECURITY TO SAVE TIME ON TRANSPORTATION

Tencent has collaborated with social security departments in Guangdong, Zhejiang and other provinces to roll out several online services, such as medical insurance payments, identity authentication for pension payments, the provision of digital social security cards and social security payments. Such solutions allow citizens to receive social security services anywhere, saving resources for municipal government departments while providing convenience to the general public. This online service is particularly useful for users living overseas.

SMART BUSINESS REGISTRATION TO INCREASE MANAGEMENT CAPABILITIES

Since 2017, Tencent has been working with the Xi'an Administration for Industry and Commerce to implement smart business and commerce capabilities. Using digital business registration services, more than 98% of companies now register their businesses and handle other registration-related matters online. Smart Business Registration solutions have enhanced the efficiency of business operations and the provision of public services. In addition, Tencent collaborated with local governments to combat unregulated products and protect consumer rights.

DIGITAL GUANGDONG

At 10am on 5 June 2018, China's first provincial digital birth certificate was issued, through Tencent's Yue Sheng Shi Mini Programs. To facilitate the digital transformation of Guangdong municipal services, Tencent leveraged its cloud computing, big data and AI technology to provide the architecture for the development of Digital Guangdong. The initiative, comprising more than 10 subsidiary platforms and services, aims to integrate all digital municipal services to streamline the processes and increase the administration's operational efficiency.

On 21 May 2018, Yue Sheng Shi, China's first integrated public administration-related Weixin Mini Programs were launched in Guangdong, providing services to the general public via mobile phones, rather than requiring them to travel to physical service outlets. In addition, to better fulfill the needs of underprivileged groups, Yue Sheng Shi has rolled out a number of services specifically designed for the elderly, the disabled and migrant workers. As of 31 December 2018, 509 frequently-used public services can be accessed via mobile phones through Yue Sheng Shi. Among them, 437 services can be completed without visiting the relevant municipal department, while 72 services only require citizens to go to the physical service hall once. More than five million users have registered on the platform and the number of average daily page views has reached 2.7 million. Yue Sheng Shi has handled more than 53 million enquires and service requests and has over 1.5 million followers on its Weixin Official Account.

CONTRIBUTING TO THE DEVELOPMENT OF THE GREATER BAY AREA WITH TECHNOLOGY

The Guangdong-Hong Kong-Macao Greater Bay Area (GBA) has a special meaning for Tencent. It is one of the fastest-growing regions in China and shows great potential for smart city development and becoming a world-class city cluster. GBA is rapidly developing into a technology and innovation hub. Tencent has its roots in the region and is passionate about contributing to its development.

In 2018 Tencent co-organised the 12th Pan-Pearl River Delta Regional Co-operation and Development Forum and the second Guangdong-Hong Kong-Macao Greater Bay Area Forum to further communication and co-operation among the cities in the Pan-Pearl River Delta region, and to ensure that technology development benefits the general public. For the second year, we organised the Tencent Youth Camp, providing opportunities for young people to visit innovative GBA enterprises and experience frontier technologies. The objective is to bridge communications between young people from Hong Kong, Macao and Guangdong and develop them into young leaders.

“Our focus on technology development lies in three areas: The first is technology breakthroughs; the second is application scenarios, which have massive market opportunities and can form many technology clusters; the third is an open ecosystem. The Greater Bay Area is an open industry chain which integrates software, hardware and services. It will attract many companies into the ecosystem to establish their business there.”

PONY MA
Co-founder,
Chairman of the Board and CEO, Tencent

In addition, the Yue Sheng Shi Mini Programs have developed services for residents in the GBA. Weixin Pay has become an indispensable part of people’s daily lives in the city cluster. Statistics show that in the first half of 2018, the number of transactions on Weixin Pay in Hong Kong and Macao recorded a seven-fold increase year-on-year. In October 2018, Weixin Pay introduced cross-border payment functions, allowing Hong Kong users to make payments in Hong Kong dollars on Weixin Pay in mainland China. Weixin Pay is the first Hong Kong-registered Stored Value Facility (SVF) that provides mainland mobile payment services for Hong Kong users.

TECHNOLOGY FOR GOOD

Tencent believes that an enterprise’s sustainable development is inseparable from the engagement and support of the community, as well as the contribution the enterprise makes to society. Tencent cares about the benefits for people from all walks of life and we shoulder our corporate social responsibilities. We aim to use technology in an ethical manner, steering our technology and products towards creating positive social impact to satisfy people’s aspirations for a better life.

The development of the Internet has impacted every aspect of people’s lives. However, it has also created new issues such as the digital divide, privacy infringement and fake information, creating a challenge for Internet enterprises.

Tencent believes that Internet enterprises should adopt a new development model that can drive social good and address problems in our society, enabling more people to enjoy the benefits that technology brings. “Tech for Good” is our fundamental and guiding principle as we continue to develop our products. The phrase “Keyboard Warrior” was once used to refer to people hiding themselves behind their screens. Today, we define ourselves as the advocates and guardians for ethical and inclusive technology.

“Digital technology has become part of our life and innovative technology has continued to proliferate. We need to pay more attention to the ethics of technology and be on guard for any negative consequences. This will help us realise a healthy relationship between technology, people and society and ensure the sustainable development of all of them.”

PONY MA
 Co-founder,
 Chairman of the Board and CEO, Tencent

**INCLUSIVE TECHNOLOGY –
 NARROWING THE TECHNOLOGY DIVIDE**
 DEVELOP ACCESSIBLE INFORMATION PRODUCTS FOR
 PEOPLE WITH SPECIAL NEEDS

At the 27th International Day of People with Disabilities on 3 December 2018, Tencent was awarded the Digital Empowerment of Persons with Disabilities prize by the United Nations Educational, Scientific and Cultural Organisation (UNESCO). We became the first organisation in Asia to win this award, as well as the first enterprise winner globally. This is recognition of our continuous efforts to develop accessible information products.

Information accessibility means everyone, including the disabled and the elderly, can acquire information on the Internet without any barriers. Ever since our inception, Tencent has integrated the idea of information accessibility into every product and service, covering social networking and life services. For example, we have developed voiceprint-activated functions in our core product, QQ, to help visually impaired people connect and interact with friends, covering daily activities such as adding new friends, understanding the meaning of an emoji and distributing red pockets. Weixin and QQ.com allow elderly users to enlarge the size of text displayed on-screen. All these functions have helped more than 100 million users to overcome barriers to accessing the Internet.

SOME OF TENCENT’S ACCESSIBLE INFORMATION PRODUCTS

EYE-TRACKING GAMES

In some games developed by Tencent, players with a physical disability can move their eyes to interact with their computers and enjoy the same game experience.

YUE SHENG SHI MINI PROGRAMS

People with disabilities can use these Mini Programs to apply for the Disability Certificate as well as social welfare benefits such as Nursing Subsidies for Severe Disabled Persons and Living Subsidies for Disabled Persons, among others. There is no longer a need for them to travel to physical premises to access these services.

THE FORBIDDEN CITY GUIDED TOUR MINI PROGRAMS

Voice functions have been embedded in the Forbidden City Guided Tour Mini Programs to provide information including location, direction, recommended route and guided tour for visually impaired people, in order to enhance their tour experience.

Scan the QR code to experience the accessible functions available in QQ

Over the years, Tencent has striven to engage the technology ecosystem in the development of barrier-less information products. In March 2018, Tencent launched the Accessible AI Technology project at the Technology Accessibility Development Conference (TADC), opening access to our three main accessible technologies – optical character recognition, text-to-speech and image to speech. In addition, we have opened up the accessible AI interface of our Multi-media AI Platform Mini Programs to our ecosystem partners. Through collaborations with enterprises and developers from different industries and sectors, we aim to build a more friendly environment for all groups to access technology and information.

CASE STUDY

HAOMANGREN MINI PROGRAMS

Haomangren, the visually impaired masseur job matching Mini Programs which were officially launched in August 2018, were developed by blind masseur Xinyang Li to connect massage shops with visually impaired workers and provide employment information to them. It is one of the resulting products within Tencent's Accessible AI Technology open source project.

CASE STUDY

WEIXIN PAY RELATIVE CARDS

Weixin Pay Relative Cards were launched in June 2018. This solution allows users to pay for their elderly parents' purchases, even if they are far away from home, enabling elderly family members to enjoy the benefits of digital technology and stay connected with their loved ones.

RUMOUR REFUSAL

TENCENT JIAOZHEN FACT-CHECKING PLATFORM TO PREVENT THE SPREAD OF FALSE INFORMATION

Over the past year, the spread of false information online through alarming clickbait headlines has led to a certain degree of public panic. With the development of social media, individuals have gradually become the main route through which information is spread. However, some less scrupulous individuals have leveraged the relaxed Internet environment and the lack of verification mechanisms to spread fake information, posing a challenge to the reliability of information online.

On 19 January 2018, Tencent Jiaozhen Fact-Checking Platform officially rolled out the Rumour Filter Assistant Mini Programs, which comprises the Tencent information verification tool, together with two other similar dedicated products for our HTML 5 mobile websites and information provider terminals. Our information verification tool, backed by a large database that has been strictly verified, allows users to check information authenticity through keyword searching. It also provides detailed verification, along with additional information on each entry. The tool is updated on a daily basis and has proven effective at combating fake information and the spread of rumours online.

As of the end of 2018, the Tencent Jiaozhen information verification platform had established deep collaborations with various organisations such as China Health Media Group, China Medical We-media Association, CCTV News and Shanghai Information Verification Platform.

SAFEGUARDING CYBER SECURITY IN THE DIGITAL ERA

“We hope the Guardian Program can explore and enhance the collaborative model and become China’s unique solution for safeguarding global cyber security.”

PONY MA
Co-founder,
Chairman of the Board and CEO, Tencent

In the digital era, information fraud and leaks and illegal information trading have increasingly threatened cyber security. With our cloud security database of one billion users and 20 years of experience in providing cyber security services, Tencent has collaborated and shared resources with various industry partners in an open, joint approach to safeguarding the public, as well as protecting the digitisation of industries in this digital era.

ONGOING SECURITY CAPABILITY UPGRADE

In 2016, Tencent launched the Guardian Program to combat illegal Internet-based activities such as copyright infringement, cross-border privacy invasion, malicious account registration and fraud. Among the cases that Tencent has since discovered, some involved large-scale, multilateral cyber-crimes.

In addition, the Weixin Security Team fights against artificial accounts by eliminating malicious registrations. In 2018, the team eliminated 800,000 malicious Weixin account registrations. The total number of malicious accounts has now reduced by tens of millions, a drop of 70%.

The Tencent Security Team also spare no effort in fighting Internet fraud and rumour. A range of Weixin Official Accounts including Weixin Security Center, Weixin 110 and Tencent 110 have posted a great number of articles about network security knowledge for their followers.

Information security is not only related to enterprises' daily operations, but also has a great impact on the foundation of an industry's development. In view of this, Tencent announced its new strategy in 2018 and further upgraded the Company's security capability to promote the development of a safe ecosystem for this digital era. From integrating our core technologies such as cloud, big data and AI, to building the Tencent United Security Laboratory and rolling out the Guardian Program and Lingkun, a big data financial security platform, Tencent has leveraged its upgraded security capability to help fulfill the mission of becoming a digital assistant for all industries. We have also pledged to help municipal departments and traditional industries drive their digital transformation and fight against cyber security risks.

Scan the QR code to learn about the 2018 Top 10 cyber security cases discovered by the Guardian Program

LEVERAGE NEW TECHNOLOGY TO COPE WITH CYBER SECURITY CHALLENGES

From January 2017 to February 2018, the Tencent Keen Security Lab tested different BMW models and identified 14 security loopholes. Based on the Lab's research results, BMW Group immediately fixed these loopholes to ensure its customers' safety on the road. In May 2018, the Tencent Keen Security Lab was recognised by BMW Group for its achievements in digital and information technology R&D in the field of car safety.

Based on the Company's core technologies, Tencent's security capability aims to monitor and solve new types of security problems. In 2018, numerous industries and users suffered from huge losses due to the peer-to-peer (P2P) lending industry turmoil. As a result, Tencent Anti-fraud Lab rolled out Lingkun to alert industry partners to the different Internet-based financial risks and illegal behaviours.

The Lingkun Platform is dedicated to detecting illegal fundraising, pyramid schemes, fraud and illegal intermediaries, and to alert banks, Internet-based and other financial organisations to potential risks. The platform is also able to intercept online criminal groups in real time and alert authorities to financial crime risks.

Tencent also launched the Lingkun Mini Programs to help users identify and report fraud and pyramid schemes to protect the digital financial environment.

COLLABORATIVE EFFORTS TO COMBAT INTERNET-BASED BLACK MARKETS

In 2018, the Tencent Guardian Program rolled out a social collaborative model to call upon all players within the industry chain to safeguard cyber security with new technology. The new alliance will be equipped to fight new risks. We are committed to safeguarding the Internet-based finance industry against network fraud and illegal products.

In 2018, the Guardian Program cracked 145 cases of cybercrime, including fraud, pyramid schemes, illegal fundraising and counterfeit money production and transactions. More than 3,200 people were arrested over cases involving more than RMB11 billion in transactions.

UNITE USERS TO STOP INTERNET-BASED PYRAMID SCHEMES

Traditional pyramid schemes are spilling over onto the Internet, making it even harder to regulate and crack down due to their virtual, invisible, deceptive and trans-regional nature. One of the key features of these schemes is that they are spread over acquaintance networks. Tencent has therefore rolled out a dedicated charitable initiative to call on users to warn their families and friends against pyramid schemes. We have also launched a Mini Program to facilitate the detection, enquiry, reporting and investigation of illegal activities, including pyramid schemes and unlawful fundraising, with the aim of nipping cyber-crime in the bud.

COLLABORATE WITH PARTNERS TO BUILD A SAFE ECOSYSTEM

Information security is a complex issue in the digital era and requires collaboration between different parties to tackle the problem. Tencent builds its security capabilities based on the Company's strong technologies and is actively cooperating with partners within the supply chain to co-develop an Internet security ecosystem for our digital community.

TENCENT'S TAKE ON SECURITY

CORE COMPETITIVENESS

- First-class teams and technology capabilities
- World-leading Internet security defence system covering the cloud, channels and terminals
- An open and beneficial-to-all ecosystem and philosophy
- 20 years of experience in network security operation and C2B service models

MISSION

- Safeguard the development of industry and economic digitalisation
- Safeguard Internet security for society at large and individual users

VALUE PROPOSITION

- Leverage big data and technology capabilities to safeguard Internet security for users and the development of the digital economy.

To focus on security capabilities, we set up the Tencent United Security Laboratory, the first laboratory of its kind in China. The laboratory develops solutions across a number of areas such as the Internet, IoT, big data, cloud and AI. It also provides security products and architecture to support traditional industries as they embrace the digital economy.

TENCENT ONLINE SECURITY LABORATORY

**Tencent Keen Security Laboratory**

Researching frontier security technology for global mainstream operational systems, Internet and mobile Internet applications, cloud computing and IoT facilities.

Tencent Yunding Laboratory

Focusing on the Tencent Cloud security system; researching defence methods and security operations under a cloud environment; developing cloud security products based on machine learning and other frontier technologies.

Tencent Anti-fraud Laboratory

Has developed three key anti-fraud database products to fight telecom-related scams.

Tencent Mobile Security Laboratory

Provides an all-inclusive security solution for mobile industry security through its terminal security platform, network security platform and hardware security platform.

Tencent Zhanhu Laboratory

Leveraging technologies such as Structure Exception Handler and Data Virtualisation Execute on data transmission paths to plug security loopholes.

Tencent Anti-virus Laboratory

Developed the TAV anti-virus engine, a world-leading proprietary technology that has obtained seven world-renowned third-party certificates. Its Habo Analysis System can effectively detect malicious software.

Tencent Xuanwu Laboratory

The laboratory identified a severe security loophole that has impacted the barcode scanner industry for 20 years and developed a way to use laser beams to combat attacks on security systems.

Through collaboration between industries, academic and research institutions, Tencent strives to nurture industry talent to support the development of the information security industry.

We launched the Tencent Capture the Flag competition to help develop cyber security specialists. We also established the Tencent Security Academy in 2018 to collaborate with universities and organisations to nurture security talent.

CHILD PROTECTION ON THE INTERNET

Online games, as an entertainment medium, have brought a lot of fun to players. However, they also cause game addiction among minors, which has attracted great attention from wider society. Motivated by our new cultural and creative strategy, Tencent has infused the games element into films, culture, education and charity, in order to unleash the positive social value of games.

PREVENT GAME ADDICTION WITH DIVERSE APPROACHES

Tencent has taken responsible steps to address the problem of game addiction among minors. The Company launched its Parental Guardian Platform in February 2017 and upgraded its Healthy Game System in September 2018. We are committed to leveraging our technology and products to assist parents in guiding their children's online habits. We are also calling on more enterprises and industry partners to work together and create a safe online ecosystem for young Internet users.

In 2018, Tencent collaborated with industry partners to develop passcode protection, device monitoring and a data-sharing functionality to establish an industry model for designing suitable hardware, online games and content for young people.

In addition, Tencent launched the Digital Natives Action (DN.A) on 14 July 2018 to work with tertiary institutions, education experts and other third-party organisations to develop an education program and learning tools to teach young people the right attitudes and habits towards using the Internet. We also collaborated with partners to encourage parents to spend quality time with their children offline and with schools to give appropriate guidance to help children establish healthy Internet habits.

DN.A INTERNET HABIT EDUCATION PROGRAM

INTERNET HABIT FAMILY EDUCATION GUIDE

Providing a practical education guide for parents to manage their children's online behaviours.

DN.A PEER INITIATIVE

Helping children in rural areas to cultivate healthy Internet habits with the assistance of their peer-friends from the city.

DEVELOP AND ADVOCATE FUNCTIONAL GAMES

Online games are innovative cultural products and have great potential to unleash positive energy. At present, most online games are entertainment-oriented and have not yet fully demonstrated their true value. Therefore, Tencent has rolled out more than 10 types of functional games centring on a range of areas such as traditional culture, science and technology and social care to help create positive social value.

TENCENT FUNCTIONAL GAMES

CULTURAL HERITAGE

Revitalising traditional culture through game interaction.

SCIENCE AND TECHNOLOGY EDUCATION

Helping adolescents build their knowledge of frontier technologies.

CHARITY AND CARE FOR SOCIETY

Raising people's awareness of philanthropy and encouraging them to care about underprivileged groups. Raising civil awareness and social responsibility.

In addition to developing functional games, Tencent has also placed emphasis on talent development in the functional game sector. On 6 September 2018, Tencent rolled out the Functional Games Developer Competition to provide a platform for outstanding talents to showcase their creations.

BUILDING A SUSTAINABLE TECHNOLOGY ECOSYSTEM

Through our practices in promoting ethics in technology, Tencent has realised that only with the engagement of and support from the whole of society can we solve the social problems linked to technology. On 20 January 2018, we launched the "Tech for Good" program at the T-Meet Conference, aiming to engage different sectors of society in dialogue, conduct research and take action to address these social problems and promote positive technology development.

NURTURING TECHNOLOGY TALENT

Since 2013, Tencent has held the WE Conference every November. We invite world-leading scientists to share their insights on frontier technology breakthroughs, motivating people to explore scientific possibilities.

To encourage young people to devote time to science exploration, Tencent collaborated with 14 well-known scientists to launch the Xplorer Prize in November 2018. The Tencent Charity Foundation will invest RMB1 billion to sponsor talented young technology specialists in their scientific research. The Xplorer Prize will award 50 science professionals under 45 years old with RMB600,000 annually for five years to support their research in nine disciplines of fundamental science and frontier core technologies. By doing so, Tencent is committed to supporting the development of young science specialists in this digital era.

"This year marks Tencent's 20th anniversary, as well as the 40th anniversary of reforms and opening-up. As a leading Internet enterprise that has enjoyed rapid development in the era of reforms and opening-up, Tencent should shoulder its social responsibility and make its own contributions to technology development."

The Tencent Charity Foundation sponsors the Xplorer Prize, which was initiated by a number of scientists. We hope to further support science professionals' exploration in fundamental science research and frontier core technologies."

PONY MA
Co-founder,
Chairman of the Board and CEO, Tencent

**A RATIONAL APPROACH TO CHARITY
POWERED BY TECHNOLOGY**

Tencent believes that the sustainable development of an enterprise cannot be achieved without the support and involvement of local communities. Enterprises also need to give back to society and drive innovation. Tencent cares about the interests of every group in the communities in which it operates and has assumed the responsibility to “Connect Everything” with technology, as well as promote the ethics of technology. Tencent embeds human qualities into its products and services and takes an active role in Internet-based philanthropy to ensure inclusive societal development and to help people pursue a better life.

“It is natural for charitable activities to evolve from an emotional to a rational approach. Stakeholders in the philanthropy industry should focus on cultivating rationality to drive sustainable philanthropy instead of concerning ourselves only with the amount of donations received.”

YIDAN CHEN
 Co-founder, Tencent
 Founder and Honorary President,
 Tencent Charity Foundation

Regarding philanthropy, donation campaigns are often the first thing people think of. However, such activities are a small part of the philanthropy industry. Tencent believes that the true value of Internet-based charity lies not in the amount of money raised, but in encouraging people to participate rationally in its activities. Rational charity helps us reflect on ways to optimise the Internet for the benefit of society.

THE TENCENT MODEL OF “INTERNET+ POVERTY ALLEVIATION”

The development of China’s rural areas is integral to the country’s future. Over the past few decades, industrialisation and urbanisation have advanced the development of cities while widening the gap between urban areas and the countryside. Tencent is committed to the development of rural areas through its technology and cultural influence.

The Chinese government has introduced a range of initiatives to revitalise rural areas. As an Internet enterprise, Tencent is also exploring how to support poverty alleviation work and rural revitalisation by leveraging our core competencies. Tencent believes that poverty alleviation should be a priority of any enterprise which desires to contribute to society.

As a result, this has become the mission and responsibility of the Tencent Charity Foundation. As of 31 December 2018, the foundation had donated a total of RMB2.236 billion to help poverty-stricken areas improve infrastructure, water safety, industry development, education, healthcare and relocations. Over the past three years, the Tencent Charity Foundation has recorded substantial increases in the amount of donations dedicated to poverty alleviation programs.

Over the past ten years, many rural areas have been disconnected from digital era gains in terms of emotional connection, information accessibility and economic benefits. As an Internet platform enterprise, Tencent is committed to promoting a strong connection between people, information and services through our ecosystem of Internet services. Tencent is responsible for eliminating the problem of isolation and alleviating poverty, in view of ensuring rural areas have ample opportunities to thrive.

Tencent’s Charity Platform and WeCounty platform are two examples of the company’s “Internet+ Poverty Alleviation” initiatives.

TENCENT CHARITY FOUNDATION POVERTY ALLEVIATION FUND (INCLUDING MATCHING DONATION FROM 9.9 GIVING DAY)

TENCENT CHARITY PLATFORM FOR POVERTY ALLEVIATION

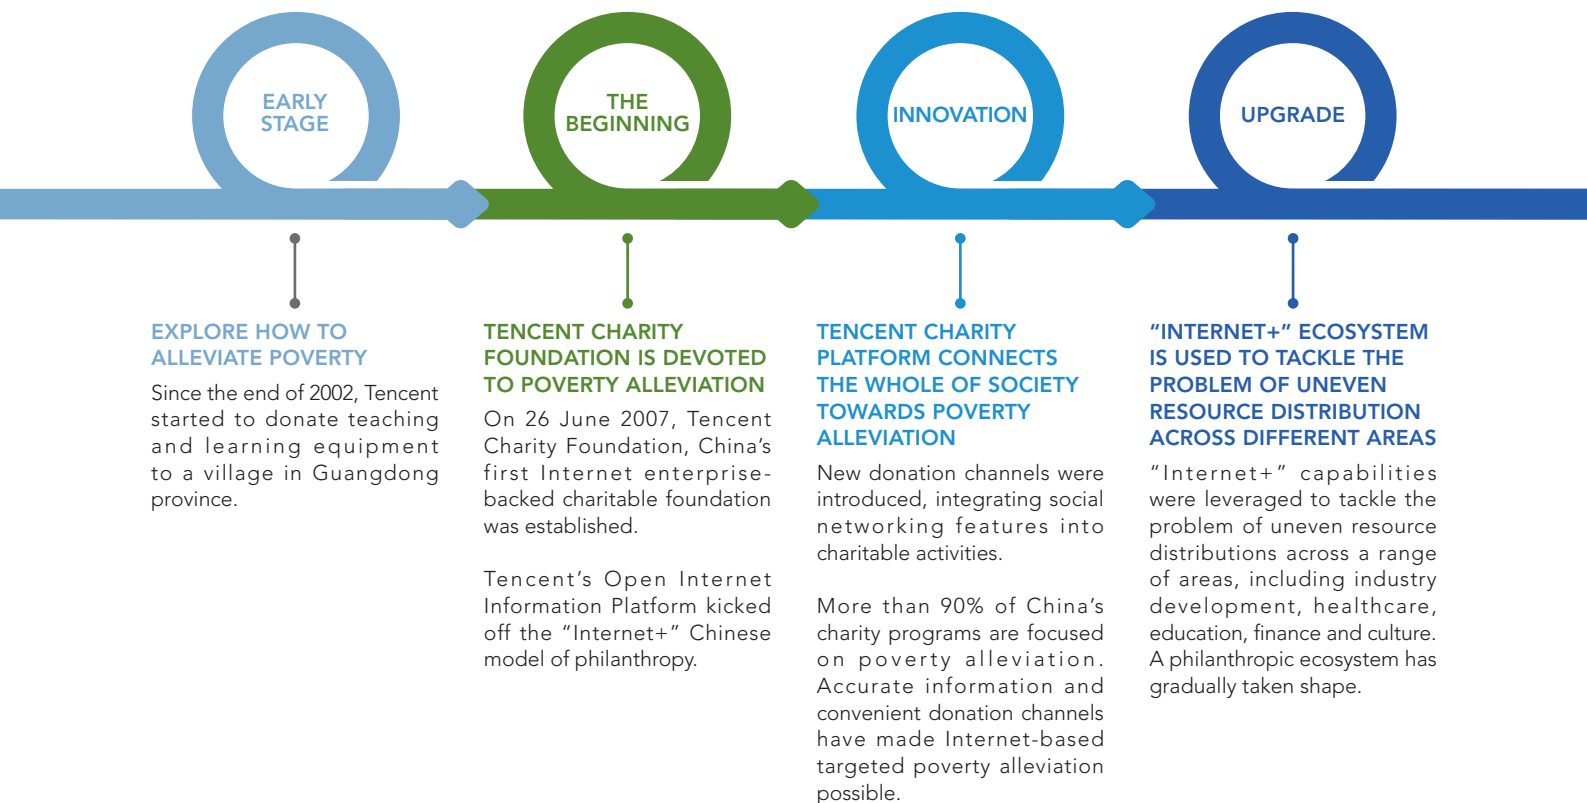

The establishment of the Tencent Charity Platform dates back to 2008, when there was a massive donation campaign across China in the wake of the Wenchuan Earthquake. Tencent built its emergency rescue and relief mechanism at that time, donated RMB21 million through the Tencent Charity Foundation and enabled hundreds of millions of Internet users to donate a total of RMB20 million through its platforms. At that time, it was the largest amount of donations from netizens in the history of Internet-based charity globally.

Tencent realised that an enterprise which leverages its core competencies to conduct charitable work will yield better results and thus help more people. Since 2008, the development of the Tencent Charity Internet Donation Platform has evolved to become more interactive and transparent. "Fingertip charity"

and "civil charity" have been introduced to make it easier for ordinary people to support charitable causes. We have also dedicated resources to targeted poverty alleviation work and in support of grassroots charity organisations.

After a decade of practice, Tencent Charity Foundation has built a robust and transparent poverty alleviation mechanism that is trusted by hundreds of millions of Internet users. Tencent Charity Platform has introduced various incentive programs, spanning products, policies and training. These programs are to promote the development of the Internet-based philanthropy industry and help charity organisations develop communications strategies, optimise donation channels, and build brand recognition. Through this work, the Chinese model of Internet-based charity is taking shape. The Tencent Charity Platform has become the largest Internet-based public donation platform in the world.

TENCENT'S "INTERNET+ POVERTY ALLEVIATION"

As of the end of 2018:

- The number of charity programs that had raised money through the Tencent Charity Platform **50,000+**
- The number of Tencent-initiated charity programs in 2018 **15,000+**
- Percentage of charity programs dedicated to poverty alleviation **90%+**

TENCENT WECOUNTY PLATFORM TO DEVELOP DIGITAL VILLAGES

Tencent believes that to solve the problem of disconnection in the rural areas of central and western China, it is important to enhance villages' administrative efficiency, promote information exchange and build emotional connections between the villages in question and the rest of the world. Since the launch of the WeCounty program in 2015, Tencent has been using its technological capabilities to revitalise rural villages.

WeCounty is a platform for village administration, targeted poverty alleviation and rural revitalisation. Tencent has provided tailored Weixin Official Accounts for villages based on their own needs and encouraged every village to build their own brand on the Internet.

As of December 2018:

28

provinces had joined the WeCounty platform

9,849+

villages had joined the WeCounty platform

2.32 million

villagers had joined their associated WeCounty village groups online

CONNECTING EMOTIONS

With WeCounty, villages can create their own Weixin Official Accounts, which allow villagers to join using their real names. This is to help create a sense of solidarity within rural communities and boost the spirits of the villagers. A good example is Xiaonengxi Village in Hunan province. After a Weixin account was created, village administrators took the initiative to help left-behind children, as well as the elderly, strengthen their connection with family members who were working in a different region. This was facilitated successfully through the WeCounty platform.

CONNECTING INFORMATION

WeCounty is also enhancing information transparency at the grassroots level. For example, the poverty relief work team of Zhutang Village, the first rural village to join WeCounty in Guangdong province, has a practice of publicising how their poverty funds are being used. In 2018, in response to rumours that local cadres had been misappropriating state-issued funds, they published their account balances, which effectively debunked the suspicion.

CONNECTING ECONOMY

Thanks to WeCounty's promotional features, two large-scale agricultural enterprises have committed to investing in Zhutang Village after learning about the village's industrial development through the platform. In addition, one of the province's leading enterprises plans to inject RMB10 million to farm one million free-range chickens in Zhutang Village within five years.

NARROWING DIVIDES BY CONNECTING EVERYTHING

Tencent's contribution to targeted poverty relief work and the revitalisation of rural villages goes well beyond fundraising initiatives and the digitalisation of communication channels. We have broadened the scope of our poverty relief projects by integrating various features such as social networking, entertainment, payments and advisory, all in view of supporting multi-level development in China's villages.

ELIMINATING THE INFORMATION GAP

Tencent strives to fill existing information gaps and connect rural areas with the rest of the world. In 2018, Tencent.com broadcast the documentary series "Poverty Relief 1+1", which tells the stories of people from 14 impoverished areas in China struggling to get out of poverty. Leveraging the strength of its e-commerce platform, Tencent created Tencent UP, a content platform that facilitates the promotion of high-quality handicrafts with local characteristics, intangible cultural heritage items and historic Chinese brands to Internet users, in view of championing Chinese culture and helping impoverished areas generate income through e-commerce channels.

LEVERAGING TECHNOLOGY TO REDUCE POVERTY

Focused on its core value, "Tech for Good", Tencent is committed to leveraging its innovation capabilities and Internet technology to deliver poverty alleviation solutions. We have explored a range of innovative applications to bring the benefits of digital development to impoverished areas and address the problem of uneven resource distribution. In Guizhou province, Tencent has partnered with the local government to launch an initiative that explores how to use cloud technology to implement targeted poverty alleviation.

PROVIDING HIGH-QUALITY EDUCATIONAL RESOURCES FOR CHILDREN IN RURAL AREAS

To narrow the gap in early education between rural and urban areas, Tencent launched the "Tencent Smart Campus" poverty relief program in different parts of China. The program offers opportunities to underprivileged students and brings hope to impoverished families. In addition, Tencent has joined Beijing Hefeng Art Foundation to co-launch Art Action, a charitable program that brings together over 10 professional art groups and academies, as well as renowned musicians, including Lang Lang, to explore how to leverage the Internet for art education and inspire children in rural areas to get involved.

ENCOURAGING BEHAVIOURAL CHANGES AND CONNECTING PUBLIC GOODWILL

DONATE STEPS WALKED TO CHARITABLE CAUSES

Tencent organised a charity walk in Xi'an on 13 May 2018. More than 1,000 participants from around China donated their steps walked through the Tencent Charity Platform, raising development funds for children living in distressed mountainous areas in Shaanxi province.

The charity walk formed part of Tencent's Behavioural Charity Campaign, which encourages people to adopt healthy lifestyles and take real action as a way of participating in philanthropic activities. Tencent has organised offline charity walks in 10 cities. Leveraging our technological capabilities embedded in the WeRun and QQ apps, we enabled participants to donate the steps they walked through our online platform.

From 22 April to 20 May 2018, through a variety of offline activities and our online step donation platform, our Behaviour Charity Campaign recorded a cumulative 34.12 million times of participation, representing 510 billion steps. This activity resulted in total donations of RMB31.33 million.

GIVING SMALL CHARITY PROJECTS PUBLIC ATTENTION

In China, social resources are often focused on the top 20% of charity projects, leaving the remaining 80%, which are usually smaller in scale, struggling for support. Using our technology, Tencent organised the Create for Good charity advertisement competition in 2017 to harness support for charity projects, in particular those small projects that would otherwise go unnoticed.

In June 2018, Tencent launched the second Create for Good charity advertisement competition, which attracted the involvement of 813 teams over half a year. Tencent provided media placement resources valued at more than RMB100 million for the participants to attract social attention and involved the public by encouraging them to like and share the entries. As of the end of 2018, the 32 winning entries had been viewed 2.3 billion times on a range of social media platforms, including Weixin Moments, Qzone and Tencent.com. About 42 million people participated in the event. The award-winning advertisement, The Team of One's tells the story of a basketball team formed by five organ recipients who were inspired by a 16-year-old organ donor. This advertisement attracted 31,622 people to register for organ donations over three days, giving hope to 110,000 patients.

Create for Good showcased the value of combining social advertisements with charitable projects, which is giving new ways for charity organisations to promote their projects.

Scan QR codes to watch winning entries

9.9 GIVING DAY

Tencent organised the fourth 9.9 Giving Day from 7-9 September 2018. Donation amounts and the resulting social impact of the event have continued to increase. During the three-day event, the Tencent Charity Platform recorded more than 28 million times of donations and raised RMB830 million for 5,498 charity projects. Moreover, the event contributed to the development of the charity sector by introducing a rational approach and increasing the level of transparency and diversity.

A RATIONAL APPROACH TO CHARITY

During the 2018 9.9 Giving Day, apart from providing RMB299.9 million in matching donations, the Tencent Charity Foundation gave RMB100 million to support the growth of charity organisations. In addition, 9.9 Giving Day introduced a new “cool-off” function on the platform which requires users to confirm that they fully understand the project and have obtained sufficient information before making their donations. The mechanism is to ensure that their participation is not only based on emotional appeal but also on reason and trust.

OPEN AND TRANSPARENT CHARITY

Tencent believes that philanthropy will prosper sustainably by committing to transparent disclosures of information to the public to win their trust. At the 9.9 Giving Day in 2018, Tencent

invited a group of scholars, experts and media practitioners to advise on setting the rules for the event. We invited Deloitte to develop a professional finance disclosure mechanism to help our charity partners provide transparent information to the public. We also launched an initiative to showcase the achievements and progress of our previous charity projects through follow-up videos. By doing so, Tencent took further steps towards creating a truly open and transparent 9.9 Giving Day, in view of winning the trust of participants interested in its philanthropy projects.

BROADENING PARTICIPATION

9.9 Giving Day advanced the development of charity for all by organising online fundraising activities and introducing more offline interactions. From 7-9 September, 9.9 Giving Day added a range of new functions, such as raising money for hometown charity projects and behavioural charity initiatives. These functions were to encourage hundreds of millions of Internet users to participate in charitable activities in a fun and rational way. In addition, we organised 9.9 Giving Day offline campaigns in shopping malls, transportation hubs and local communities in more than 100 cities in a push to promote charity in everyday life.

From 7-9 September 2018, Tencent Charity Platform received a total of more than 28 million donations from Internet users.

HELPING CHARITY ORGANISATIONS INCREASE EFFICIENCY

Having worked with different philanthropic industry stakeholders during 9.9 Giving Day, Tencent introduced a new open information platform to upgrade the management model of charity organisations and increase the efficiency of their communications. Using the Corporate Weixin function, the platform shares Tencent’s cloud capabilities to assist charity organisations with registration, team collaboration, project launches and daily management.

After charity organisations have built their multi-account management systems, they are able to set different log-in accounts under a single organisational ID. This function supports a more streamlined method for carrying out internal and external communications, collaboration, monitoring and service provision. In addition, charity organisations are able to share project and financial information on both Corporate Weixin and Weixin Charity Platform.

<p>ORGANISATION REGISTRATION</p> <ul style="list-style-type: none"> • New registration process • User-friendly guidance and alert 		<p>REGISTRATION TIME reduced by 20%</p>
<p>MEMBER COLLABORATION</p> <ul style="list-style-type: none"> • Single ID for multiple accounts • Support con-current account access 		<p>COLLABORATION EFFICIENCY increased by 50%</p>

<p>DAILY MANAGEMENT</p> <ul style="list-style-type: none"> • Task notification • Progress monitoring 		<p>MANAGEMENT EFFICIENCY increased by 20%</p>

BUILDING A PHILANTHROPY ECOSYSTEM

Over the past 10 years, with the rapid expansion of Internet-based charity in China, problems such as misleading information, irresponsible donation activities and inefficient execution of charity projects have hindered the development of the philanthropy industry. To address these issues, Tencent began working with the Narada Foundation and other organisations to launch the China Internet Good Summit in 2016. The aim of the summit was to build a platform for philanthropy industry participants to exchange ideas and collaborate with each other in view of creating a philanthropy ecosystem.

On 17 December 2018, the third China Internet Good Summit was held in Beijing. Representatives from 115 organisations in the philanthropy industry gathered to discuss the future development of Internet-based charity in China. It was the most widely represented event in the history of Internet-based charity since it began in the country. Industry leaders committed to working together to develop a mechanism and set of standards to recapture the public’s trust and move towards a sustainable philanthropy ecosystem. A newly established summit committee will work to establish an industry communication platform, so as to publicise flagship charity cases and promote Internet-based charity applications.

**TECHNOLOGY AS A MEANS OF
ESTABLISHING CULTURAL CONNECTION**

As our economy becomes increasingly globalised, people are longing for cultural enrichment, which is important for preserving the unique heritage and inheritance of a country. For Tencent, using technology to promote cultural expression is part of our commitment to “Tech for Good”. It is also a means of fulfilling China’s growing cultural aspirations. Capitalising on the Internet+ trend that advocates the application of the Internet and other information technology in conventional industries, Tencent is working hard to promote the richness of Chinese culture both domestically and internationally.

REJUVENATING TRADITIONAL CULTURE WITH DIGITAL TECHNOLOGY

Standing at the intersection of technology and culture, Tencent embraces its responsibilities as an enterprise founded on the bedrock of these two elements. It strives to make good use of new technologies, models and content to promote Chinese culture and boost the nation’s “cultural confidence”.

However, in this era of mobile Internet, traditional culture that is not well represented online will struggle to draw widespread attention. Introducing traditional culture to the public, especially among young generations, has become a priority. Tencent endeavours to give traditional culture inroads into the Internet to highlight and preserve it.

DUNHUANG’S HERITAGE

In June 2018, Tencent and the Dunhuang Research Academy co-launched the Digital Provider project. Users can view videos on HTML5 pages on their mobile phones to obtain Wisdom Tips. These tips are based on annotations describing different parts of some 30-plus Dunhuang murals, in combination with familiar, modern-day scenes and languages. The program is designed to present the history and beauty of the Dunhuang murals to the uninitiated, enabling them to understand something of and be inspired by the culture of Dunhuang. Digital Provider also encourages members of the public, especially young people, to get involved in efforts to protect the murals through online charity, games, music, comics and other methods.

GAMES

The attires of select characters in Tencent’s game, “Honour of Kings”, are inspired by the flying Apsaras depicted in the murals of the Dunhuang Grotto. Such visual effects showcase the artistic beauty of Dunhuang culture and digitally preserve the murals among gamers.

MUSIC

Tencent teamed up with musicians to create music that blends classical Dunhuang styles with elements popular among young people today, so as to promote Dunhuang’s traditional music and culture.

COMICS

Together with the Dunhuang Research Academy, Tencent rearranged the “Sutra illustrations” into comics to tell stories of the illustrations in the form of comic strips.

CULTURE AND CREATIONS

Tencent launched some do-it-yourself interactive Mini Programs, whereby users can make personalised Dunhuang silk scarves on the Tencent Cultural and Creative platform.

A SINGING MASTERPIECE FOR THE PALACE MUSEUM

The Palace Museum in China is a treasure trove of traditional Chinese culture. To keep the heritage of the museum alive, Tencent designed solutions that combine modern technology with culture, connectivity with content and intellectual property with creative ideas.

In July 2016, Tencent and the Palace Museum formed a partnership. Since then, we have launched a host of emoticons representing the museum, to help the institution keep pace with modern trends. In 2018, Tencent and the museum launched A Singing Masterpiece, which invited young musicians to compose music based on 11 ancient paintings at the Palace Museum. Their works were later compiled into an album.

THE EMPEROR QINSHIHUANG'S MAUSOLEUM SITE MUSEUM

In 2018, Tencent began working with Emperor Qinshihuang's Mausoleum Site Museum to launch the Museum Guided Tour Mini Programs to provide a digital tour guide for museum

visitors. With the Mini Programs, each user can enjoy 360-degree panoramas and 3D views of the mausoleum's terracotta warriors. There is also a related Weixin platform that contains videos featuring historical anecdotes, the mausoleum's day-to-day operations, prominent exhibits and more.

CHINESE POEMS IN SPACE

In 2018, Weixin partnered with the Shanghai Academy of Spaceflight Technology to launch the Weixin Space Poet Mini Programs, which collected 50,000 voice recordings of Weixin users around the world reading poems of their choice. The recordings were then put together and taken to space on Long March 4B, China's orbital carrier rocket, on 25 October 2018.

Scan the QR code to listen to the poems

THE GREAT WALL

In 2016, Tencent started a collaboration with the Great Wall of China and has since launched a variety of programs, including Let's Build the Great Wall Together and the copyright-protected Great Wall Soldier character. These programs aim at preserving the cultural heritage of the Great Wall by means of fundraising, image building and cultural education.

In June 2018, under the guidance of the National Cultural Heritage Administration, Tencent, together with the Chinese Academy of Cultural Heritage and China Foundation for Cultural Heritage Conservation, led 41 organisations, including institutions specialised in Great Wall research, to establish the Great Wall Protection Alliance. The alliance aims to strengthen efforts to protect the Great Wall so that its cultural heritage can be preserved and enjoyed for many generations to come.

THE GREAT WALL PROMOTION INITIATIVES LAUNCHED BY TENCENT

PROMOTING THE DEVELOPMENT OF CULTURE AND CREATIVE INDUSTRIES

Apart from protecting traditional culture, Tencent believes it is equally important to promote contemporary culture. In 2018, Tencent launched the culture and creativity strategy, which gives top priority to cultural and social values to motivate creativity and explore new methods to protect and manage copyrights. The aim is to cultivate a dynamic cultural sector in China and explore a China solution whereby the development of digital culture is guided by innovation.

TENCENT'S EFFORTS IN PROMOTING NEW CULTURE AND CREATIVITY

SAFEGUARDING CONTENT CREATION

The rise of the Internet has improved the quality of life in many ways, but it has also given rise to the problem of online plagiarism and copyright infringement. Tencent believes more can be done to protect copyright owners.

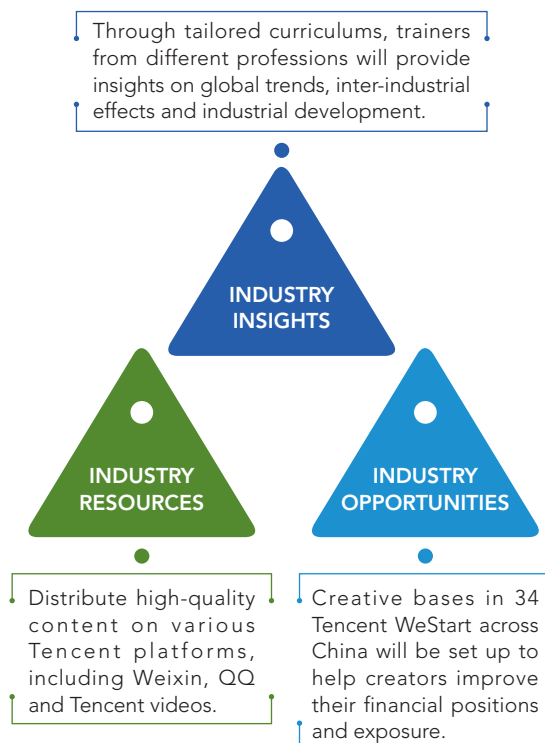

In 2018, we upgraded our open media platform, Penguin Media Content Platform, and launched the industry's first self-media platform, which includes access to electronic authorisation, surveillance and copyright protection with just one click. Penguin Media Content Platform also launched the Copyrights Partner initiative, which features a rights infringement penalty mechanism, enabling copyright owners to claim 100% of damages from infringing parties.

In 2018, Tencent Penguin Accounts one-click copyright protection system safeguarded the copyrights of 55 million works; it protected against 20 million instances of plagiarism; recalled six million instances of infringement; and welcomed one million copyright partners to Penguin Accounts.

CULTIVATING THE CULTURAL AND CREATIVE INDUSTRY

On 16 April 2018, Tencent announced a partnership with the Beijing Film Academy to set up a training camp to nurture globally-minded professionals in the cultural and creative sector and promote the development of China's cultural and creative ecosystem. The camp attracted more than 1,000 applicants and accepted 50 candidates.

The focus of the training camp is on innovation across a range of cultural and creative products, such as short videos, online-only shows, anime and films. Tencent will invite first-class trainers to offer industry insights, resources and opportunities to content creators and promote the commercialisation of their works, all in view of energising China's cultural and creative industry in a new way.

BRINGING CHINESE CULTURE TO THE REST OF THE WORLD

While promoting China’s cultural industry domestically, Tencent is also working to foster international cultural exchange. Musically, we have released an album featuring the music of different ethnic groups in China in 110 countries and regions – including “Belt and Road” countries and regions. In the area of comics, we have given permission to the creative sectors in Japan, South Korea, the United States and France to release more than 100 Chinese comic and animation works. To give visibility to Chinese literature, we launched an online platform with over 150 Chinese works translated into English and more than 3,000 original English-language works for overseas readers. Regarding eSports, we had three such games demonstrated at the 2018 Jakarta Palembang Asian Games.

CASE STUDY

TENCENT X MARVEL

In 2018, Tencent teamed up with Marvel Comics and invited six groups of specialised craftsmen to use traditional Chinese methods to create figurines of Marvel characters, which were then displayed on Weixin Mini Programs. We wanted culture from the East and the West to blend and interact on Weixin through Weixin Mini Programs, Weixin Voice Messages and Weixin’s social networking chain. The initiative opened a window for more people to experience the richness of China’s cultural heritage.

USING DIGITAL TECHNOLOGY FOR ENVIRONMENTAL CONSERVATION

In 2018, China's Constitutional Amendment added "ecological civilisation" to the preamble, marking the beginning of a new chapter in the country's efforts to conserve the environment. In the same year, the Ministry of Ecology and Environment was established under the State Council's institutional reform.

Tencent believes that the natural environment is fundamental to the sustainable development of humanity. We are committed to protecting the environment and promoting sustainability through the "Internet+" model, which applies big data, cloud computing and AI to the realm of ecological and environmental conservation.

At Tencent, we regularly reflect on what we can do to create a better world so that future generations can all live under a blue sky.

To live up to our corporate social responsibility commitments, align ourselves with the conservation objectives of the society and support the needs of the public as well as charity organisations going green, we have developed a range of digital solutions. They are being applied in three areas, namely, green operations, green community building and green partnerships.

GREEN OPERATIONS

GREEN HEADQUARTERS

In November 2017, our new headquarters, Tencent Binhai Towers in Shenzhen, began operations. The building, fully-connected with advanced technology, is exemplary of how Tencent is moving towards green operations. The building received the LEED-NC Gold certification in recognition of its environmental commitment.

Tencent used a green office concept in the building's design to achieve an integrated ecological workplace, in view of keeping energy consumption to a minimum. The floor of the 8,000 square-metre plaza outside the complex is paved with permeable ceramic bricks. The top floors of the southern and northern towers are laid with ceramic grains, which serve to purify rainwater, slow the flow of water and prevent floods.

GREEN DATA CENTRES

On 29 May 2018, the first phase of Tencent's Gui'an Seven-Star Data Centre commenced pilot operations. Adopting the fourth-generation data centre technology, T-Block, the centre is positioned as a disaster recovery data centre.

With a capacity of up to 300,000 servers, the Gui'an data centre, located in Guiyang, Guizhou province, is one of the most energy-efficient data centres in China today, with a maximum power usage efficiency (PUE) of 1.1, far below the national average of 1.73. The facility takes full advantage of Gui'an's climate features, geology, transportation infrastructure and low energy cost, to optimise for heat dispersion and ventilation. Cool air currents can easily flow into the complex, significantly boosting energy efficiency.

CARBON EMISSION AUDIT

Every year, Tencent submits to the relevant authorities an annual carbon emissions report audited by a third party.

GREEN COMMUNITY BUILDING

SPONGE CITIES

In China, flood control is one of the most challenging issues in urban management. Fortunately, an increasing number of local authorities in cities across the country have adopted the “sponge city” model, a modern stormwater management approach that involves the use of low-impact development measures.

In Shenzhen, there are multiple sponge city projects in different parts of the city. To ensure a proper and accurate assessment of rainfall patterns, knowledge of rainwater quality, timely data collection and real-time monitoring are necessary. To accomplish this, Shenzhen’s authorities recently invited Tencent to participate in a sponge city ecology governance project.

Tencent has contributed its technology and know-how to assist the project in terms of performance evaluation, operations management, city administration, project management and public engagement.

NATIONAL PARK CONSERVATION

Apart from promoting the sponge city approach in densely populated cities, Tencent is also committed to protecting rare species of animals and plants in national parks.

At China’s Two Sessions in 2018, Pony Ma, Co-founder, Chairman and CEO of Tencent and a National People’s Congress delegate, submitted a proposal entitled “Suggestions on Encouraging Social Welfare Organisations to Participate in the Construction and Management of National Parks”.

Mr. Ma affirmed that national parks belong to everyone in society and that charitable organisations should leverage their expertise to help preserve habitats in national parks.

He offered five suggestions:

01 Enact a National Park Law to define the legal status of charitable organisations that participate in national park projects, as well as the scope in which they can be involved in the development and management of national parks.

02 Establish sound mechanisms for public donations to national park projects, as well as protection agreements.

03 Empower charitable organisations to promote the development of communities around national parks and provide environmental education, thereby complementing the work of government departments to foster sustainable development and enhance public awareness about conservation.

04 Establish incentive and supervisory mechanisms regarding the involvement of charitable organisations in the development and management of national parks. These could take various forms, including tax incentives, subsidies and talent support.

05 Create consensus in society about the importance of national park preservation through relevant promotional and communication channels.

GREEN PARTNERSHIPS

TENCENT-WWF PARTNERSHIP

On 20 April 2018, Tencent and WWF announced a strategic partnership. With the Guangdong-Hong Kong-Macao Greater Bay Area as the starting point, the two parties have committed to a digitally-driven approach to advance the cause of ecological conservation. The partnership has three leading missions.

CRACK DOWN ON ILLEGAL ONLINE WILDLIFE TRADE

In March 2018, Tencent became part of a global alliance of Internet companies founded to reduce illegal online trading in wild animal and plants. In China, Tencent initiated a charitable campaign called Tencent For The Planet in 2015 to encourage

Weixin and QQ users to report illegal online wildlife trade activity. Weixin accounts confirmed to contain illegal, wildlife trade-related product information will be banned from operation.

RAISE PUBLIC AWARENESS ABOUT ECOLOGICAL CONSERVATION

Another mission of the partnership with WWF is to raise people's awareness about the importance of ecological conservation. Tencent created the Digital Landmark application with WWF, so that when visitors stroll along Shenzhen Bay they can experience augmented reality-transformed cityscapes, in which all kinds of wildlife co-exist. The objective in creating this kind of digital content is to draw people's attention to the cause of environmental protection.

TALENT DEVELOPMENT FOR ECOLOGICAL CONSERVATION

Finally, through the alliance, Tencent and WWF hope to groom a new generation of leaders in the ecological conservation sector. There are currently 370,000 forest keepers working in national parks across China. But they lack adequate training due to their remote locations, the absence of qualified trainers and the lack of systematic training programs. To address these problems, Tencent has incorporated into its online learning platform, Tencent Classroom, a broad spectrum of high-quality training content provided by WWF, as well as useful resources sourced from experts and think tanks. These learning materials are tailored to support the efficacy of personnel working in the field of national park conservation.

OTHER INITIATIVES

On 19 December 2018, Tencent and the National Forestry and Grassland Administration signed a strategic cooperation agreement against illegal online wildlife trade.

Tencent has also joined forces with both government agencies and charitable organisations to forge agreements aimed at fostering stronger connection between nature and mankind. The pact brings together resources to promote ecological and wildlife conservation and find solutions to the problem of illegal wildlife trade through the use of digital technology.

Tencent also established the Penguins Love Earth – Natural Ecological Conservation Advisory Group to create a knowledge platform on biodiversity, as well as a legal framework to govern the various aspects of nature conservation.

Throughout 2018, Tencent identified and sanctioned **more than 2,000 Weixin accounts** involved in illegal wildlife trade.

CARING FOR EMPLOYEES

Tencent pools talent from around the world and considers human capital essential to its growth. We are committed to supporting our employees' professional and personal development.

EMPLOYEE BENEFITS

We have created an environment for our employees to participate meaningfully in the development of the Internet industry, build their careers and realise their dreams. We strive to instill in all employees a sense of belonging and ensure they feel gratified and empowered at work. To this end, we offer competitive remuneration and benefits, as well as a pleasant work environment for everyone to enjoy.

Every new employee is given a set of 54 welfare cards, all of which fall under three categories: wealth, health and living. Each card represents a benefit introduced at the suggestion of existing employees through our online forum.

At Tencent, we regard our employees as our primary asset. To safeguard their rights, we make sure to provide them a discrimination-free work environment, one where equality is

valued. We have also put in place an incentive compensation scheme. Every employee at Tencent enjoys a competitive salary commensurate with their role. At the end of each year, there are performance bonuses and service bonuses for employees. "Star employees" and "star teams" receive awards.

In addition to providing employees with a pension, social security and insurance as required by China's employment law, we also offer life, accident and medical insurance plans, which they can customise as per their family's needs. We have also offered critical illness insurance, lines of credit, residential schemes, health programs and paid-leave for employees that need financial and psychological relief.

We also provide benefits such as transportation to and from work, bring-your-family-to-work day, healthcare hotlines, physical check-ups, team building activities, gifts during festivals, incentive rewards and wedding and childbirth bonuses. Finally, we provide psychological support, such as professional counselling, to employees in need.

DUAL PATH OF DEVELOPMENT

Employees are key to Tencent's growth. We are committed to providing them training opportunities to help them enhance their critical thinking abilities and support their development.

We have also launched a program that provides employees with dual paths of development, allowing them to take up a managerial role or stay in their own professional field as they gradually move up the career ladder.

For example, when an employee in a technical position wants to take on a marketing or sales role, he or she can ask for a transfer to a different department. Or, if the employee wants to switch to a managerial position, the dual-path development mechanism can facilitate the move.

With such a system in place, our employees are empowered to set career goals for themselves, knowing there is clear path and a set of concrete benchmarks. Tencent provides resources and support to its employees at every stage of their career development. Our approach to career growth is to motivate employees and tap into their strengths, thereby improving their work satisfaction.

TRAINING AND DEVELOPMENT SYSTEM

Tencent Academy, established in 2007, is a corporate learning institute that constitutes an important part of the Company's employee training system. It aspires to be the most respectable corporate university in the Internet industry. The Academy strives to play multiple roles, including being a career development advisor, reliable business partner and an assistant supporting enterprises' digital transformation.

Since its establishment, the Academy has been providing tailored talent development programs for employees of different ranks. The training courses are organised by category, including managerial training, career development programs and orientational programs. There are also programs designed for users outside of the Tencent organisation. Most of the programs are available online.

Today, the Academy runs more than 380 offline training courses, 90% of which are developed by Tencent. In addition, over 7,400 online courses are available. The Academy organises more than 8,200 classes annually, involving more than 1,400 corporate lecturers and engaging 88% of Tencent's employees.

As of the end of 2018, courses offered by Tencent Academy have been accessed 1.15 million times online by nearly 40,000 people.

WORK-LIFE BALANCE

Tencent is committed to helping employees achieve a healthy work-life balance. To this end, we have formed a wide range of interest groups. We periodically organise events and activities of various kinds, helping employees to reduce stress and enjoy life outside of work. The events and activities include townhall meetings, an annual Christmas party, culture and sports clubs, Tencent Culture Day, lunches with leaders, carnivals, and an annual singing contest.

To ensure employees enjoy the benefits of a work-life balance, we strive to provide a comfortable work environment. At Tencent Binhai Towers, we combine cutting edge technology with human-centred design to provide different areas for staff members to work and relax. There is also a well-equipped gym that houses a broad range of facilities, including a climbing wall, an indoor running track, a basketball court and treadmills, all designed to help employees maintain a strong bill of health.

At the 2018 Christmas dinner, one of the most important and popular events at Tencent, a documentary was broadcast, showing how the Company evolved from its humble beginnings two decades ago into a leading Internet-based value-added service provider in China.

Scan the QR code to watch a short video on Tencent 2018 Christmas Party

TENCENT AND I

To mark the 20th anniversary of Tencent, we invited our employees to contribute stories about how they have grown with Tencent. These stories demonstrated how young people from around the world have learned and developed with the Company over the past 20 years. Tencent's success is the result of the integrity, perseverance and dedication of its employees.

CHARITABLE WORK BY EMPLOYEES

On 25 April 2018, nearly 100 Tencent volunteers from across China gathered at our office in Shenzhen for the Tencent Volunteers Conference, where they exchanged stories about their volunteering experiences.

Since its inception in 2006, the Tencent Volunteers Association has contributed more than 120,000 hours of voluntary service from more than 60,000 people. The Association has more than 20 sub-divisions in different cities and departments and represents a wide range of focus areas.

Leveraging its expertise in technology, the Association has been involved in and contributed to various causes, including the tracing of missing persons, information accessibility, cybersecurity, care for the elderly and children with special needs, inclusive information technology, emergency missions, poverty relief, environmental protection, animal protection and community services. These services are based on Tencent's commitment to "Tech for Good".

In 2018, Tencent volunteers organised a total of 185 voluntary activities, in which **2,880 people** participated.

Altogether, the volunteers contributed **14,781 hours** of service.

ART THERAPY FOR CHILDREN WITH SPECIAL NEEDS

In 2018, Tencent Chengdu initiated an art therapy project with a local charity, targeting children with special needs. The initiative dates back to April 2009 when Tencent volunteers took part in a charity campaign for autistic children, after which they decided to set up a project team within the Tencent Volunteers Association dedicated to children with special needs.

INCLUSIVE TECHNOLOGY FOR THE VISUALLY IMPAIRED

In 2014, Tencent volunteers initiated a project to help visually impaired people use technology. They did this by offering them training in the use of desktop and mobile devices, accompanying them in social activities and advocating for product designs accommodative to the visually impaired. With support from the government and our charity partners, we organised 12 computer and mobile phone training sessions designed to equip visually impaired people with basic digital skills.

RECYCLING EVENT BACKDROP

To promote environmental protection, the Tencent Volunteers Association formed a green project team to encourage Tencent's employees to put green ideas into practice in their day-to-day life. In 2018, the team initiated a campaign to recycle the material used in creating the backdrop for Tencent's annual celebration, turning it into reusable bags.

STEPS FOR CHARITY AND TREE PLANTING

In April 2018, more than 5,000 of our employees, their family members and alumni, took part in a 12-kilometre charity walk and donated the steps they walked to the Free Lunch project for children in rural areas.

Since 2003, Tencent has been encouraging employees to take part in tree planting activities. The event has now become a signature outdoor charity activity.
